ICE DATA INDICES RULES AND METHODOLOGY

ICE Spot Commodity Index Series

ICE Silver Spot Index (SILVERNY)

The ICE Silver Spot Index (the "Silver Index") tracks the performance of the IDD Spot Silver price (in U.S. dollars per troy ounce) as published by ICE Data Derivatives ("IDD") as of the New York Stock Exchange ("NYSE") closing time, which is 4:00 p.m. Eastern Time on full trading session days and 1:00 p.m. Eastern Time on partial trading session days.

The Silver Index is calculated on each day on which the NYSE is open for a full or partial trading session ("Business Day").

The Silver Index is calculated every 15 seconds between the hours of 8:00 AM Korea Standard Time and 4:30 PM Eastern Time, based on the most recently published IDD Spot Silver price. The closing Index level is calculated based on the IDD Spot Silver price as of the NYSE closing time, and the Index level does not change after such time for the remainder of the Business Day.
The "Spot Silver" price refers to the prevailing price for immediate, standard-size wholesale settlement of unallocated, good-delivery silver in the global over-the-counter (OTC) market, as indicated by executable or indicative bids and offers sourced from participating banks and brokers. The IDD Spot Silver price represents the midpoint derived from an aggregation of data that IDD receives from brokers and banks. IDD applies proprietary formulas, monitoring tools, and quality-control procedures to determine the most accurate and stable price levels across its sources.

The Silver Index value is calculated based on the daily change in the IDD Spot Silver price, as described below.

$$IV_n = IV_{n-1} \times (1 + TRR_n)$$

Where:

IV_n = Silver Index closing value on Business Day *n*

IV_{n-1} = Silver Index closing value on the prior Business Day (*n-1*)

TRR_n = Silver Index total return percentage on Business Day *n*

The Silver Index total return percentage is calculated as:

$$TRR_n = \frac{P_n}{P_{n-1}} - 1$$

Where:

Pn = IDD Spot Silver price on Business Day *n*

Pn-1 = IDD Spot Silver price on the prior Business Day (*n-1*)

Inception date: January 4, 2016

ICE Gold Index (GOLD)

ICE Gold Index (the Index) tracks the performance of the LBMA Gold Price PM. The price used is that of the Afternoon Auction in USD, set at 3pm London time.

The Index is calculated on all days for which the LBMA Gold Price PM is published.

The index value is calculated based on the change in the LBMA Gold Price PM, as described below.

$$IV_n = IV_{n-1} \times (1 + TRR_n)$$

where

IV_n = closing index value on day *n*

IV_{n-1} = closing index value on prior global business day (*n-1*)

TRR_n = Index total return% on day *n*

The Index total return is calculated as:

$$TRR_n = \frac{P_n}{P_{n-1}} - 1$$

where
Pn = LBMA Gold Price PM on day *n*
Pn-1 = LBMA Gold Price PM from the prior day (*n-1*)

Inception date: December 29, 2006

Currency variants[1]

The following formula is utilized to calculate additional **Currency Variants** of an Index:

$$\mathrm{Index(C)_t} = \mathrm{Index(C)_b} \times \frac{Index(B)_t}{Index(B)_b} \times \frac{FX_t}{FX_b}$$

Where:
$Index(C)_t$ = Index Level (Currency Variant) on Index Business Day *t*
$Index(C)_b$ = Index Level (Currency Variant) on Index Base Date *b*
$Index(B)_t$ = Index Level (Base Currency) on Index Business Day *t*
$Index(B)_b$ = Index Level (Base Currency) on Index Base Date *b*
FX_t = FX rate between Base Currency and Variant Currency on Index Business Day *t*
FX_b = FX rate between Base Currency and Variant Currency on Index Base Date *b*

Currency hedged variants

The following formulas are utilized to calculate **Currency Hedged Variants** of an Index:

$$HedgedIndex_t = HedgedIndex_m \times \left(\frac{UnhedgedIndex_t}{UnhedgedIndex_m} + HI_t\right)$$

Where:
$HedgedIndex_t$ = Hedged Index Level on Index Business Day *t*
$HedgedIndex_m$ = Hedged Index Level on last Index Business Day *m* of the prior month

[1] The ICE Gold EUR Hedged Index (GOLDEURH) and the ICE Gold GBP Hedged Index (GOLDGBPH) are calculated using an alternative currency hedging formula. Please refer to the individual rule sets for these indices for more information.

$UnhedgedIndex_t$ = Underlying Unhedged Index Level on Index Business Day t
$UnhedgedIndex_m$ = Underlying Unhedged Index Level on last Index Business Day m of the prior month
HI_t = Hedge Impact (gain or loss) for the currenc(ies) in the Index (see below)

Please note that the *UnhedgedIndex* is the relevant Currency Variant of the Index, as defined above, that is calculated in the same currency being hedged to:

$$HI_t = \sum_{i=1}^{n} \left\{ Weight_{i,m} \times HR \times \left(\frac{SR_{i,m}}{FR_{i,m}} - \frac{SR_{i,m}}{FIR_{i,t}} \right) \right\}$$

Where:
HI_t = Hedge Impact (gain or loss) for currenc(ies) i on Index Business Day t
$Weight_{i,m}$ = Weight of currency i in the *UnhedgedIndex* at the close of the last Index Business Day of the prior month
HR = Hedge Ratio for currency i (by default, 100%, unless otherwise indicated in specific Index methodology)
$SR_{i,m}$ = Spot Rate for currency i in terms of the Index hedged currency as of the last Index Business Day of the prior month
$FR_{i,m}$ = 1-month Forward Rate for currency i in terms of the Index hedged currency as of the last Index Business Day of the prior month
$FIR_{i,t}$ = 1-month Forward Interpolated Rate for currency i in terms of the Index hedged currency as of Index Business Day t

$$FIR_{i,t} = SR_{i,t} + \left[\left(FR_{i,t} - SR_{i,t} \right) \times \left(\frac{DaysRemaining_{i,t}}{DaysinMonth} \right) \right]$$

Where:
$SR_{i,t}$ = Spot Rate of currency i on Index Business Day t
$FR_{i,t}$ = Forward Rate of currency i on Index Business Day t
$DaysRemaining_{i,t}$ = Number of calendar days from Index Business Day t until the last Index Business Day of the month, not inclusive of Index Business Day t
$DaysinMonth$ = Number of calendar days in month from the first calendar day to last Index Business Day of the month

By default, London 4:00 PM WMR Spot and Forward FX rates are used in the calculation of the Currency Hedged variants of the Index.

Inception date: December 31, 2006

ICE Gold EUR Hedged Index (GOLDEURH)

ICE Gold EUR Hedged Index (the Index) tracks the performance of the LBMA Gold Price PM hedged into EUR. The price used is that of the Afternoon Auction in USD, set at 3pm London time. The currency hedge methodology assumes a rolling 1-day hedge which will be rolled at 1pm each day using spot-next forward rates. All foreign exchange and forward rates are mid rates, calculated as (bid+offer)/2 based on the rates and forwards published by WMR at 1pm London time.

The Index calculation assumes a notional value ("Notional") used to establish a long USD gold position and hedge the currency exposure back to base currency EUR. On the Index inception date, EUR is sold and USD purchased at the 1pm London spot. Simultaneously, a spot-next forward contract ("Forward") selling the same USD amount is established. The USD proceeds are then used to purchase gold at the LBMA Gold Price PM fixing to initiate a gold position ("Gold"). Going forward, the Notional is adjusted to equal the Gold held.

The Index value incepted at 1000 on September 30, 2016. The Index is calculated on all business days ("Business Days"), defined as days on which commercial banks in London are generally open for business, WMR exchange rate fixings are published, and the LBMA Gold Price PM fixing is posted.

Calculation Methodology

Definition of Terms

S_t: EUR-USD spot exchange rate on t
SD: spot date, T+2 Common Business Days
SN: spot-next date, SD+1 Common Business Days
SN+1: SD+1 Common Business Days
SN+2; SD+2 Common Business Days
SW: SD+1 week
TN: tomorrow-next, SD-1, or T+1 Common Business Day
ON: overnight, SD-2, next Common Business Day
FW_t:: EUR-USD 1-week forward exchange rate on t
G_t: Gold held at end-of-day t
L_t: LBMA Gold Price PM fixing on t
Vt: Proceeds of the Forward ("P&L") on t
N_t: notional of the forward currency hedge, which is the dollar value of gold as of the previous day's closing plus the proceeds of the Forward ("P&L"), defined as $G_{t-1}L_{t-1} + V_t$

A Common Business Day is a day on which commercial banks are generally open for business and settlements available in the UK, the US and the Eurozone. For the Eurozone this would typically align with the harmonized settlement calendar.

Currency Hedge

The Forward used for purposes of the currency hedge must settle on a Business Day. In the event that the Eurozone is open for settlement but the UK is not, the forward settlement date will be the next Common Business Day available for both Forward and Gold.

The Forward used in the EUR currency hedge is calculated as follows:

$$F_t = S_t + (FW_t - S_t)(SN-SD)/(SW-SD)$$

On each Business Day (t) the proceeds of the Forward ("P&L") will be reinvested in Gold. The P&L (V) is calculated as follows

$$V_t = N_{t-1} (R_t / F_{t-1} - 1)$$

where, R_t is the close-out price of the Forward, which typically corresponds to S_t, but can correspond to tomorrow-next (TN), overnight (ON), spot-next plus one (SN+1) or spot-next plus two (SN+2) depending on the Forward settlement date.

Reinvestment of Hedge Proceeds

Any amounts realized from the P&L is reinvested in Gold. The Gold added as a result of reinvestment (D) is defined as follows:

$$D_t = V_t / L_t$$

Thus,

$$G_t = G_{t-1} + D_t$$

Index Level Calculation

The total return index value is calculated as follows:

$$INDEX_t = (G_t\, L_t) / S_t$$

ICE Gold GBP Hedged Index (GOLDGBPH)

ICE Gold GBP Hedged Index (the Index) tracks the performance of the LBMA Gold Price PM hedged into GBP. The price used is that of the Afternoon Auction in USD, set at 3pm London time. The currency hedge methodology assumes a rolling 1-day hedge which will be rolled at 1pm each day using spot-next forward rates. All foreign exchange and forward rates are mid rates, calculated as (bid+offer)/2 based on the rates and forwards published by WMR at 1pm London time.

The Index calculation assumes a notional value (“Notional”) used to establish a long USD gold position and hedge the currency exposure back to base currency GBP. On the Index inception date, GBP is sold and USD purchased at the 1pm London spot. Simultaneously, a spot-next forward contract (“Forward”) selling the same USD amount is established. The USD proceeds are then used to purchase gold at the LBMA Gold Price PM fixing to initiate a gold position (“Gold”). Going forward, the Notional is adjusted to equal the Gold held.

The Index value incepted at 1000 on September 30, 2016. The Index is calculated on all business days (“Business Days”), defined as days on which commercial banks in London are generally open for business, WMR exchange rate fixings are published, and the LBMA Gold Price PM fixing is posted.

Calculation Methodology

Definition of Terms

S_t: GBP-USD spot exchange rate on t
SD: spot date, T+2 Common Business Days
SN: spot-next date, SD+1 Common Business Days
SN+1: SD+1 Common Business Days
SN+2; SD+2 Common Business Days
SW: SD+1 week
TN: tomorrow-next, SD-1, or T+1 Common Business Day
ON: overnight, SD-2, next Common Business Day
FW_t:: GBP-USD 1-week forward exchange rate on t
G_t: Gold held at end-of-day t
L_t: LBMA Gold Price PM fixing on t
Vt: Proceeds of the Forward (“P&L”) on t
N_t: notional of the forward currency hedge, which is the dollar value of gold as of the previous day’s closing plus the proceeds of the Forward (“P&L”), defined as $G_{t-1}L_{t-1} + V_t$

A Common Business Day is a day on which commercial banks are generally open for business and settlements available in the UK and the US.

Currency Hedge

The Forward used for purposes of the currency hedge must settle on a Common Business Day.

The Forward used in the GBP currency hedge is calculated as follows:

$$F_t = S_t + (FW_t - S_t)(SN-SD)/(SW-SD)$$

On each Business Day (t) the proceeds of the Forward (“P&L”) will be reinvested in Gold. The P&L (V) is calculated as follows

$V_t = N_{t-1} (R_t / F_{t-1} - 1)$

where, R_t is the close-out price of the Forward, which typically corresponds to S_t, but can correspond to tomorrow-next (TN), overnight (ON), spot-next plus one (SN+1) or spot-next plus two (SN+2) depending on the Forward settlement date.

Reinvestment of Hedge Proceeds

Any amounts realized from the P&L is reinvested in Gold. The Gold added as a result of reinvestment (D) is defined as follows:

$D_t = V_t / L_t$

Thus,

$G_t = G_{t-1} + D_t$

Index Level Calculation

The total return index value is calculated as follows:

$INDEX_t = (G_t L_t) / S_t$

Index Sponsor & Administrator

ICE Data Indices, LLC ("IDI") is the Index Sponsor and the Index Administrator. IDI is responsible for the day-to-day management of the Indices, including retaining primary responsibility for all aspects of the index determination process, including implementing appropriate governance and oversight, as required under the International Organization of Securities Commission's Principles for Financial Benchmarks (the IOSCO Principles). The Governance Committee is responsible for helping to ensure IDI's overall compliance with the IOSCO Principles, by performing the Oversight Function which includes overseeing the development, design, issuance and operation of the indices, as well as reviewing the control framework. IDI is also responsible for decisions regarding the interpretation of these rules and the Governance Committee is responsible for reviewing all rule book modifications and index constituent changes with respect to the Index to ensure that they are made objectively, without bias, and in accordance with applicable law and regulation and IDI's policies and procedures. Consequently, all IDI's and the Governance Committee discussions and decisions are confidential until released to the public.

Exceptional market conditions and corrections

IDI retains the right to delay the publication of the index level. Furthermore, IDI retains the right to suspend the publication of the level of the index if it believes that circumstances prevent the proper calculation of the index.

The below are treatments for specific index data inputs:

- LBMA Gold Price
    - If the LBMA Gold Price is not available, the indices will not be recalculated unless IDI decides otherwise.

- IDD Spot Silver Price
    - If the IDD Spot Silver price on Business Day *n* has been determined using data from less than three participating sources, then IDI shall review the IDD Spot Silver price and determine, utilizing Expert Judgment, whether it is representative of the underlying market and should be used in the calculation of the Silver Index.

- If it is determined that the IDD Spot Silver price is not representative of the underlying market, or, if no IDD Spot Silver price is available on Business Day *n*, the Silver Index would not be calculated for that day.

Reasonable efforts are made to ensure the correctness and validity of data used in index calculations. Where errors have occurred in the determination or calculation of an index, the decision to make a restatement will be assessed on a case-by-case basis. Such decision will take account of the significance; impact; age; and scale of the error.

In the event that there is a market-wide event resulting in prices not being available, IDI will determine its approach on a case-by-case basis, taking into account information and notifications provided by ICE Benchmark Administrator and/or IDD. Market-wide events include, but are not limited to, the following:

- Technological Problems / Failures
- Natural Disaster or Other BCP-Related Event

IDI will communicate any issues with publication of the indices during the day through the regular client communication channels; in addition, IDI may also contact clients directly; post a notice on the IDI website; send a message via the market data portal or use other such forms of communication.

Expert Judgment

"Expert Judgment" refers to the exercise of discretion by an Administrator or Submitter with respect to the use of data in determining a Benchmark. Expert Judgment includes extrapolating values from prior or related transactions, adjusting values for factors that might influence the quality of data such as market events or impairment of a buyer or seller's credit quality, or weighting firm bids or offers greater than a particular concluded transaction. While IDI mostly relies on input data obtained from its sources, on certain occasions, where decisions relating to the pricing of a Benchmark are required to maintain the integrity of the values and ensure that the Benchmark continues to operate in line with the methodology, IDI may apply Expert Judgment. Where it is required in a Benchmark determination, it may only be applied by suitably experienced and qualified staff Members on the IDI team. Using their expertise and knowledge, and the information available to them, they will make an assessment of what input data or security evaluation would be most appropriate to use to correctly reflect the Benchmark objective. Ultimately any exercise of Expert Judgment is overseen by the IDI Index Governance Committee, which ensures that the published Methodologies have been followed.

Periodic Review of Index Rules

Rules and methodologies are reviewed periodically, in accordance with IDI's policies and procedures, to ensure the Indices continue to meet their objective. The Index Administrator shall announce changes in Rules and methodologies, along with their implementation dates, in accordance with its policies and procedures. As it relates to material changes, the Index Administrator will also consult on proposed material changes that affect the Index prior to making such changes, in accordance with IDI's consultation policy: https://www.ice.com/publicdocs/Consultation_Policy.pdf.

Rule book changes

The IDI Index Governance Committee reviews all rule book modifications and Index changes to ensure that they are made objectively, without bias and in accordance with applicable law and regulation and IDI's policies and procedures. These rules may be supplemented, amended in whole or in part, revised or withdrawn at any time in accordance with applicable law and regulation and IDI applicable policies and procedures. Supplements, amendments, revisions and withdrawals may also lead to changes in the way the Index is compiled or calculated or affect the Index in another way.

Limitations

The Benchmark may be limited by IDD's ability to determine a silver price or IBA's ability to determine a gold price from the auction. IDI seeks to manage and mitigate this limitation through the Benchmark design, review and oversight processes.

The Indices do not take into account ESG factors.
