

Required Report: Required - Public Distribution

Date: December 04, 2023

Report Number: PK2023-0022

Report Name: Oilseeds and Products Update

Country: Pakistan

Post: Islamabad

Report Category: Oilseeds and Products

Prepared By: Waqas Farooq

Approved By: Christopher Rittgers

Report Highlights:

On 24 November, the Federal Cabinet approved amendments to the National Biosafety Rules, which should enable genetically engineered soybean imports to resume in the first half of calendar year 2024. As a result, the 2023/24 soybean import forecast is raised from 0.5 million tons to 1 million tons. No changes are made to rapeseed/canola supply and demand estimates.

Oilseeds:

Amendments to the Pakistan Biosafety Rules (PBR) should allow for resumption of genetically engineered (GE) soybean imports in 2024.

On 24 November, the Federal Cabinet approved amendments to the 2005 PBR. The amendments should enable importers to eventually obtain an import license for GE commodities destined to food, feed, and processing. The Ministry of Climate Change (MOCC) still must further clarify guidelines on how the import licensing system will be implemented. It is possible that MOCC may finalize the implementing guidelines as early as first quarter calendar year 2024, allowing for GE soy and canola imports to resume. As a result, the 2023/24 soybean import forecast is increased to 1 million tons. GE soybean and canola imports have been blocked since October 2022.

The 2022/23 soybean import estimate is updated based on final year trade data.

The 2023/24 rapeseed import forecast is unchanged at 0.8 million tons. At 950,000 tons, rapeseed was most imported oilseed in 2022/23. Australia, a non-GE canola producer, attained a market share of 60 percent, with an import volume of 570,000 tons.

Meals:

Production

As a result of the expected increase in soybean imports, the 2023/24 crush and meal production forecasts are also increased accordingly.

GE soybean import ban leads to more soybean meal (SBM) imports.

After not importing SBM for several years, the ban on GE soybean imports led importers to import an estimated 116,000 tons in 2022/23. The 2023/24 SBM import forecast is reduced to 100,000 tons due to expectations for the resumption in soybean imports.

Poultry producers have reported inconsistent and lower quality meal supplies, which has worsened the feed conversion ratio. It is taking longer for broilers to attain market weight. Due to insufficient SBM in the local market, raw material costs for broiler production have increased significantly. The SBM shortage has caused some poultry farm managers to stop producing. Domestic poultry meat production declined an estimated 40 percent in 2023 because of the soybean import ban.
