

Voluntary Report – Voluntary - Public Distribution

Date: June 30, 2025

Report Number: SG2025-0012

Report Name: 2025 Senegal Peanut Annual

Country: Senegal

Post: Dakar

Report Category: Oilseeds and Products

Prepared By: Fana Sylla

Approved By: Erik Syngle

Report Highlights:

Senegal MY 2025/26 peanut area harvested is forecast at 850,000 HA, a five percent year-over-year increase. Senegal's subsidized prices for seeds and fertilizers are expected to motivate farmers to plant more. MY 2025/26 peanut production is forecast at 770,000 MT. Senegal's provisional statistical data estimates MY 2024/25 peanut production at 731,000 MT, a 56 percent decrease compared to the previous year due to a new statistical reference base adopted by Senegal in MY 2024/25. This has had the effect of lowering production numbers for almost all crops including peanut. The minimum farm gate price for MY2024/25 was fixed by Senegal at 305 FCFA (\$0.51), a nine percent increase from the previous year.

OILSEED - PEANUT

Production

MY 2025/26 peanut area harvested is forecast at 850,000 Hectares (HA), representing a five percent increase from the previous marketing year. This is based on increased access to inputs like certified seeds, fertilizers, and equipment. Senegal's Ministry of Agriculture increased by eight percent its agricultural budget compared to the previous year for the implementation of the 2025-2026 agricultural campaign. The peanut minimum farm gate price, which is fixed at the beginning of each marketing year, can also serve as a motivation to plant more if the price is advantageous compared to other crops such as cotton. The Ministry of Agriculture has received through intermediaries (official collectors) about 61,700 MT of seed peanuts to be distributed to farmers at a subsidized price during MY2025/26.

MY 2025/26 seed peanut production is forecast at 770,000 MT with the expectation of good rainfall and normal pest pressure, an estimated 5.3 percent increase from the previous marketing year. MY 2024/25 production is estimated at 731,000 MT, representing a 54 percent decrease from MY 2023/24.

Additional context is required for these data. For MY 2024/25 moving forward, the Government of Senegal (GOS) adopted a revised production data methodology for nearly all crops including peanuts. This change was intended to offset previous errors, which has consequently lowered production numbers dramatically.

For MY 2024/25, an interministerial decree fixed the period of the peanut campaign from December 5, 2024 to April 7, 2025, and fixed the minimum farm gate price at 305 FCFA (\$0.51), increasing nine percent from the previous year.

As of April 24, 2025, out of the three main peanut processing companies, only the Societe Nationale de Commercialisation des Produits Oleagineux du Senegal (SONACOS) collected peanut seeds, collecting about 155,500 MT. The other two main processors, COPEOL and the Sine Saloum International Industries (SSII), are still not able to collect peanuts in MY 2024/25 due to ongoing financial negotiations with the bank that have not yet concluded.

Sonacos, a state-owned company, is the largest processing company, with eight locations in Senegal and an industrial presence in Dakar, Diourbal, Kaolack, Ziguinchor, Louga, and Kolda. The company is working on renovation and modernization of its industrial facilities to increase processing capacity. SONACOS carries several brands such as NIINAL, a refined soybean oil enriched with vitamin A, NIANI and AradOr, both premium refined peanut oils enriched with vitamin A. A subsidiary SETUNA produces feed under the YAFAL brand made from peanut oil cake. For more information, please visit <https://www.sonacos.sn>.

Trade

MY 2025/26 exports are forecast at 260,000 MT, increasing four percent from the previous marketing year based on available supply. Data for MY 2024/25 exports has not been officially released by GOS. According to Trade Data Monitor (TDM), January-April 2025 peanut exports are estimated at 247,580 MT. China remains the top export destination with 99 percent of market share, followed by Morocco (less than one percent).

This year, GOS decided that before exportation, processing companies need to collect enough quantity to satisfy the domestic market. According to media reports, exportation has been authorized from March 25 to June 15, 2025, and all exports should be accompanied with a phytosanitary certificate delivered by the National Plant Protection office.

The National Agency for Statistics and Demography (ANSD) published the average monthly retail price (FCFA/kg) of shell peanuts for consumption in the regions of Senegal. Year-over-year price comparisons for the same period (March 2024 vs. March 2025) shows a 48 percent increase in the region of Dakar (675 FCFA [\$1.13] vs. 1,000 FCFA[\$1.67]). In other regions, there was a decrease, including Louga (-24.6 percent), Kedougou (-23.1 percent), and Fatick (-17.3 percent). For more data, please visit [ANSD here](#).

Stocks

MY 2025/26 stocks are forecast at 120,000 MT, decreasing 20 percent from the previous marketing year due to available supply. MY 2024/25 peanut stocks are estimated at 150,000 MT, 67 percent lower than the preceding year due to the major production decrease that depleted stocks.

Senegal: Oilseed, Peanut: Production, Supply and Distribution Table

Oilseed, Peanut Market Year Begins	2023/2024		2024/2025		2025/2026
