Date: September 30, 2025

Report Number: VM2025-0036

Report Name: Oilseeds and Products Update

Country: Vietnam

Post: Hanoi

Report Category: Oilseeds and Products

Prepared By: Nguyen Linh

Approved By: Ralph Bean

Report Highlights:

Vietnam's soybean crushers are expanding capacity with new production lines. As a result, soybean imports are expected to rise, while local soybean meal production increases and imported soybean meal declines in Marketing Year (MY) 2025/26.

Executive Summary

Vietnam completed a government restructuring, reducing four levels of administration to three: national, provincial, and commune governments. District-level government no longer exists. According to the National Statistics Office's August report, Vietnam's economy continues to grow, but at a slower month-on-month pace. As of August 31, total exports increased, though exports from domestically owned industries declined during June–August. International financial institutions recently revised Vietnam's GDP growth forecast downward compared to earlier projections this year, citing global uncertainties and reliance on exports.

Farm-gate liveweight hog prices have fallen close to production costs. African Swine Fever remains widespread across the country, slowing swine repopulation in MY2024/25. Market volatility and export dependence are expected to hinder catfish and shrimp production.

Soybean crushers are expanding capacity, boosting local soybean meal production and soybean imports. Post maintains its forecast for soybean imports at 2.5 million tons in MY2024/25 and 2.8 million tons in MY2025/26. Post also revises soybean meal consumption for feed upward to 7.2 million tons in MY2024/25, due to its lower price and higher inclusion rate in feed formulas, and projects further growth to 7.6 million tons in MY2025/26 in line with rising feed demand.

Vietnam removed *Cirsium arvense* from its quarantine pest list and ceased inspections in September 2023. As of March 31, 2025, Vietnam eliminated the Most-Favored-Nation (MFN) tariff on soybean meal.

OILSEEDS SITUATION AND OUTLOOK

Soybean

Production

As of August 20, 2025, Vietnam’s National Statistics Office¹ (NSO) reported that the soybean harvested area is 25,500 hectares. Post revises soybean harvested area estimates for both MY 2024/25 increasing to 27,000 hectares with total production at 45,000 metric tons and reduces to 26,000 hectares for MY 2025/26 with total production at 42,000 metric tons. The continued decline in soybean planted and harvested area is due to Vietnamese farmers switching to more profitable crops like fruits and vegetables.

Table 1: Soybean Production

	2022	2023	2024	2025*	2026*
Crop area (thousand ha)	32.5	30	27	27	26
Crop yield (MT/ha)	1.6	1.6	1.6	1.6	1.6
Total production (TMT)	52	48	45	45	42

Source: National Statistics Office (NSO), Ministry of Agriculture and Environment (MAE)²,
The data includes inventory of winter crop in the north starting from October annually.

*Post estimates

Consumption

Industrial crush

Post revises MY 2024/25 soybean crushing down to 1.70 million metric tons (MMT) due to the delay of the additional crushing line in the southern facility and forecast to increase to 2.10 MMT in MY 2025/26 due to expected additional crushing volume from both southern and northern facilities.

Soybean crushing is driven by the demand for soybean meals for animal and aquaculture feed, as well as for soybean oil.

Food Use Consumption

Post forecasts soybean consumption for food use in MY 2024/25 at 540,000 tons, increasing to 550,000 tons in MY 2025/26 due to continued growth in the food service and tourism sectors. According to

¹ Vietnam National Statistics Office: www.nso.gov.vn
² Since March 01, MARD merged with Ministry of Natural Resources and Environment into Ministry of Agriculture and Environment

NSO, as of August 31, 2025, total retail and services revenue in Vietnam increased by 9.4 percent compared to the same period of the previous year. Revenues from food, beverage, and lodging services rose by about 14.7%. For international tourists, total arrivals increased by 21.7% compared to the same period of the previous year.

Feed, Seed, Waste Consumption

Post maintains soybean feed consumption estimates at 220,000 tons for MY2024/25, rising to 240,000 tons in MY2025/26, in line with projected poultry and swine production growth.

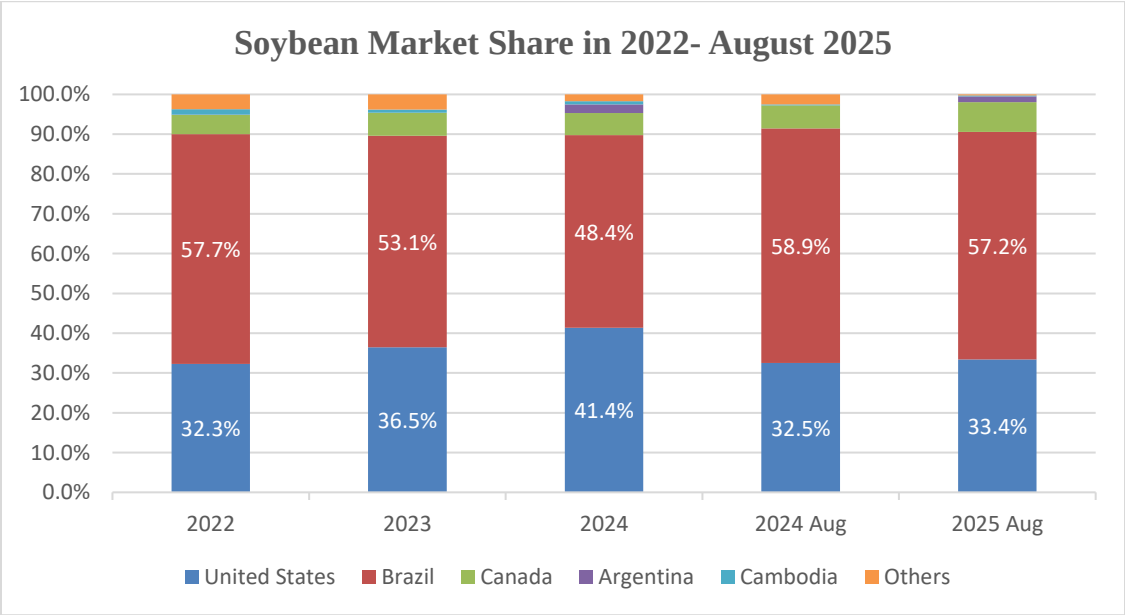

Trade

Imports

Post holds the soybean import estimate at 2.50 MMT in MY2024/25, reflecting projected additional crushing volume at southern facilities, and projects an increase to 2.80 MMT in MY2025/26 with the expected expansion of northern facilities and rising food consumption.

According to Vietnam Customs, Vietnam’s soybean imports as of August 31, 2025, were 1.81 million tons, an increase of 25.3 percent compared to the same period of the previous year. Brazil was the largest soybean exporter, with 57.2 percent of the market share, while the United States held 33.4 percent, followed by Canada. Imports of U.S. soybeans increased by 28.7 percent compared to the same period of the previous year.

Table 2: Soybean Suppliers Market Share (percentage)

Source: Vietnam Customs published at <https://www.customs.gov.vn>

Policy

On August 15, 2023, MARD issued Circular 04/2023, renewing the list of quarantine pests of the Socialist Republic of Vietnam. *Cirsium arvense* is no longer listed. The Circular entered into force on September 29, 2023. After that time, MARD ceased inspections for this pest.

Peanuts

Production

Post raises the peanut production estimate to 388,000 tons for MY2024/25³ on 146,000 hectares and projects a decline to 378,000 tons on 142,000 hectares in MY2025/26, due to farmers shifting to more profitable crops such as fruits and vegetables. As of August 20, 2025, the NSO reported that total peanut harvested area is 129,500 hectares, unchanged from the same period last year.

Table 3: Vietnam’s Peanut Production

	2022	2023	2024	2025*	2026*
Crop area (thousand ha)	159	153	146	146	142
Crop yield (MT/ha)	2.57	2.62	2.65	2.65	2.65
Total peanut production** (TMT)	410	402	388	388	378

Source: NSO, MARD

*Post estimate

**in-shell basis

Crush

Post maintains its forecast for peanut crush volume at 35,000 tons for both MY 2024/25 and MY 2025/26. This reflects a low estimated oil extraction rate of 0.26 due to the small scale of production and limited crushing technology. Peanut crushing occurs at the household level, based on family consumption and some small-scale processors.

Food Use Consumption

Post keeps its forecast of total peanut consumption at 545,000 tons in MY2024/25, further increasing to 550,000 tons in MY2025/26, due to the expected rebound of tourism, processing, and the service sector.

³ Marketing Year (MY) of peanuts is from January 1 to December 31.

Most locally produced and imported peanuts are consumed through retail sales channels, food service, and the food processing industry (especially the snack industry) for both domestic consumption and export.

The rebound of the tourism sector, along with restaurants, foodservice providers, street vendors, wholesale and wet markets, and small retail stores, is projected to drive an increase in domestic consumption of in-shell and shelled peanuts.

In-shell peanuts are available from street vendors in boiled and roasted forms, at “Bia hoi” (fresh draft beer) restaurants, and in wet markets during harvest season. Several "Bia hoi" restaurants in Hanoi and Ho Chi Minh City have closed due to reduced demand for dining out, caused by the zero-tolerance alcohol policy for drivers. Small retail stores typically sell raw shelled peanuts in bulk, while modern retailers, such as supermarkets and hypermarkets, offer packaged raw shelled peanuts. Foodservice providers and food processors typically buy peanuts in bulk.

Trade

Imports

Post revises Vietnam’s peanut (in-shell basis) import forecast upward to 230,000 tons for both MY2024/25 and MY2025/26, reflecting projected declines in local production and growth in the services and tourism sectors.

According to Vietnam Customs, as of December 31, 2024, Vietnam imported 227,000 tons of peanuts (in-shell basis), down about 37 percent compared to the previous year. The decrease in imported shelled peanuts is due to reduced exports via border trade with China and Cambodia. Vietnam imports shelled peanuts for processing and re-export to China and Cambodia.

According to Trade Data Monitor (TDM), global exports of prepared and preserved peanuts (HS code 200811) to Vietnam, including peanut butter, are about 1,500 tons in 2024. China and Thailand are the main exporters.

Table 4: Vietnam’s Peanut Imports, by HS code

Year	2022	2023	2024	August 2024	August 2025
Total in-shell peanut (MT) (HS code 120241)	2,319	2,324	1,668	526	2,071
Total shelled peanut (MT) (in-shell basis) (HS code 120242)	215,127	352,846	223,410	162,558	128,151
Total peanut imports (in-shell					

basis) (MT)	217,446	355,081	225,078	163,084	130,222
--------------------	----------------	----------------	----------------	----------------	----------------

Source: Vietnam Customs and Post's calculation

**Note: Conversion rate from shelled peanut into in-shell peanuts: 1.33.*

Exports

Post revises its estimate of peanut (in-shell basis) exports down to 59,000 tons in MY 2023/24 due to lower market export demand. Post revises peanut (in-shell basis) export estimates down to 30,000 tons in MY 2024/25 and MY2025/26 due to higher forecasted domestic production in China.

According to TDM, Vietnam exported about 2,500 tons of prepared and preserved shelled peanuts (HS code 200811) in the first eight months of MY 2023/24, an increase of 12 percent compared to the same period last year. Taiwan is the primary importer.

Table 5: Vietnam Peanut Exports, by HS Code 200811

Year	2022	2023	2024	August 2024	August 2025
Shelled peanut exports (MT) (<i>HS code 200811</i>)	3,065	2,796	3,129	2,220	2,490
Peanut exports (in-shell basis) (MT)	4,076	3,719	4,162	2,952	3,311

Source: TDM⁴

Note: Peanuts are on an in-shell basis, including shelled peanuts HS code 200811 including peanut butter, but volume of peanut butter is negligible.

Conversion rate from shelled peanut into in-shell peanuts: 1.33.

⁴ Vietnam is not a reported country in TDM. Throughout this report, every time TDM is noted, Vietnam exports refer to global imports from Vietnam and Vietnam imports refers to global exports reported to Vietnam.

Table 6: Vietnam's Peanuts Exports, by HS code

Year	2022	2023	2024	August 2024	August 2025
Total in-shell peanut (MT) (<i>HS code 120241</i>)	2,779	4,568	4,455	3,759	2,919
Total shelled peanut (MT) (in-shell basis) (<i>HS code 120242</i>)	80,043	176,948	49,762	41,400	18,622
Peanut exports (in-shell basis) (MT)	82,822	181,516	54,217	45,400	21,541

Source: Vietnam Customs and Post's calculation

**Note: Conversion rate from shelled peanut into in-shell peanuts: 1.33.*

Copra

Production

According to the Ben Tre Coconuts Association⁵, following the merger of provincial governments⁶ in Vietnam, there are currently 20 provinces with coconut-growing areas, down from 39 in the past. Total coconut planting area was 200,000 hectares with production reaching 2.3 million metric tons in 2024. Vinh Long (formerly part of Ben Tre) is the largest coconut- growing province, accounting for 60 percent of the total area. Processors use contract farming with farmers to ensure quality and a stable supply for processing and food consumption. A contracted farmer with 1.1 hectares of coconut trees may earn \$7,000 USD a year, providing a significant income source for a rural family.

The coconut black-headed caterpillar (*Opisina arenosella*) was first detected in Ben Tre province in July 2020. As of June 12, 2025, a weekly pest report from the Ministry of Agriculture and Environment’s (MAE) Plant Production and Protection Department (PPPD), indicated that approximately 307 hectares in major coconut-growing provinces have been infested. This pest damages coconut leaves and nuts and can kill the trees. Another pest, *Brontispa longissima*, a leaf beetle that feeds on young leaves, affects both seedlings and mature coconuts. PPPD reported that about 5,212 hectares of coconuts have been infested.

Post maintains its forecast that the coconut planting area will increase to 200,000 hectares in MY 2024/25 and continue to increase to 202,000 hectares in MY 2025/26, due to higher expected profits compared to other crops and its strong resistance to saline intrusion. Post forecasts the harvested area at 190,000 and 192,000 hectares in MY 2024/25 and MY 2025/26, respectively, because it takes four to five years from the time of planting before coconut trees are ready for their first harvest.

Vietnam’s copra production is a by-product of its coconut oil production, with an estimated extraction rate of 64 percent from milling copra to coconut oil.

Table 7: Coconut and Copra Production

	2022	2023	2024	2025*	2026*
Coconut planting area (thousand ha)	194	196	198	200	202

Source: MAE, NSO, TDM, Ben Tre Coconut Association and Coconut Processing Companies

*Post estimates

*** Estimated extraction rate is 64 percent.

Consumption

Industrial Use

Most local coconut processors are located in Vinh Long province, which has the largest coconut growing area. The total estimated annual production capacity of 10,000 tons of crude and refined coconut oil and 5,000 tons of virgin coconut oil for both domestic and export markets.

Post maintains its copra crush estimate at 24,000 tons for both MY 2024/25 and MY 2025/26. This reflects the estimated increase in coconut oil production due to expected higher exports.

Food Use

There is no official production data for copra, desiccated coconut, and other coconut products or their consumption in Vietnam. However, the major coconut products for food use include fresh and mature coconuts for immediate consumption and cooking, coconut milk, desiccated coconut, coconut milk powder, refined coconut oil, and coconut juice.

Other mature coconuts and coconuts in the inner shell are used for further processing into products including desiccated coconuts, coconut milk, coconut jelly, coconut candy, packaged coconut juices, and butter, as well as for sale in traditional wet markets across the country or for export for direct consumption.

Trade

Vietnam continues to import and export a negligible volume of copra, instead focusing on other coconut products.

Table 8: Vietnam's Coconut Product Imports

Unit: MT

Product group	2022	2023	2024	July 2024	July 2025
Desiccated coconuts (HS code 080111)	22,524	339	2,721	1,628	1,931
Coconuts in the inner shell					

(Endocarp) (HS code 080112)	605	12,637	31,337	2,456	38,405
Coconuts, other than desiccated (HS code 080119)	4,375	14,095	26,112	4,546	37,954
Copra (HS code 120300)	82	178	142	89	285
Coconut fibers (HS code 530500; 530511; 530519; 530810)	3,605	4,220	3,913	2,175	3,493

Source: TDM and Post's calculations.

Coconut products that are exported include desiccated coconuts, coconuts in the inner shell, coconut milk, coconut fibers, and activated charcoal. According to TDM, there is a continued increase of Vietnam's desiccated coconut exports to the world in the last three years. Vietnam's exports of coconut milk to Thailand and coconut juices to China also increased.

Table 9: Vietnam's Coconut Product Exports

Unit: MT

Product group	2022	2023	2024	July 2024	July 2025
Desiccated coconuts (HS code 080111)	19,877	24,315	26,189	12,609	10,500
Coconuts in the inner shell (Endocarp) (HS code 080112)	229,890	235,889	177,209	118,448	78,359
Coconuts, other than desiccated (HS code 080119)	60,546	73,795	164,481	120,457	37,568
Copra (HS code 120300)	1	20	-	-	-

Source: TDM

*Coconut milk exports to Thailand

On August 8, 2023, the USDA's Animal and Plant Health Inspection Service (APHIS) officially notified Vietnam's Plant Protection Department that partially de-husked coconuts will now be classified as a processed product. This allows Vietnamese producers to begin shipping partially de-husked coconuts to the United States, with shipments subject to inspection at U.S. ports of entry.

In August 2024, China granted market access for Vietnamese fresh coconuts. Export volume of Vietnamese coconuts to that market is expected to increase.

According to local media, total Vietnamese exports of coconut products were valued at \$1.09 billion in 2024, with estimated exports rising to \$1.2 billion in 2025. Post forecasts coconut product exports to increase in MY2024/25 and MY2025/26, supported by expanded market access and a projected economic rebound in the country and region.

Rapeseed

Production

There is no official data for rapeseed production in Vietnam. Rapeseed cultivation occurs mainly in the northern mountainous provinces as part of the tourism industry or for household consumption. Post continues to estimate the rapeseed planted area at 1 thousand hectares for MY2024/25 and MY2025/26⁷.

Consumption

Aside from the tourism industry, rapeseed is also used for oil extraction at the household level. Post estimates very low rapeseed consumption to continue in MY2024/25 and MY2025/26.

⁷ Marketing Year (MY) of rapeseed, rapeseed meal and rapeseed oil are from October to September.

MEALS SITUATION AND OUTLOOK

Soybean Meal

Production

Post revises the soybean meal (SBM) production estimate in MY2024/25⁸ down to 1.3 million tons and increasing in MY2025/26 to 1.6 million tons. This reflects the soybean crushing volume forecast.

Table 10: Vietnam’s Soybean Meal Production

	2022	2023	2024	2025*	2026*
Total Local SBM Production (TMT)	1,015	1,015	1,093	1,328	1,638

Source: Local Producers, *Post estimate.

Feed Consumption

Vietnam has completed its government restructuring plan at the national, provincial, and commune levels. District-level government no longer exists. The country is in the process of amending legislation and laws to align with the new government system, with decentralization as one of its key strategies. Post continues to monitor and update the situation.

Both financial institutions, the Asian Development Bank (ADB) and the International Monetary Fund (IMF⁹), forecasted lowering Vietnam’s GDP growth due to uncertainties and increasing external challenges.

MAE's report stated that as of August 31, Vietnam's swine and poultry populations increased by 0.5 percent and 3.6 percent, respectively, while the cattle population declined. The Vietnam Association of Seafood Exporters and Producers (VASEP¹⁰) reported that total catfish and shrimp exports reached \$1.4 and 3 billion respectively, an increase of 10 and 23 percent compared to the same period of the previous year. VASEP forecasted that seafood exports will face challenges in the U.S. market in 2026 due to higher tariffs compared to competitors such as Ecuador and Thailand, particularly in the shrimp sector.

Liveweight hog prices have decreased since July to around VND 55,000 per kilogram. Small farmers may have incurred losses when selling live hogs at these prices, according to a local source. In addition to feed, piglets, and environmental compliance costs, hog farmers and producers must pay high biosecurity expenses to prevent ASF outbreaks, which have occurred throughout the country since early

⁸ Marketing Year (MY) of SBM is from January 1 to December 31
⁹ IMF is International Monetary Fund and ADB is Asia Development Bank
¹⁰ VASEP: Vietnam Association of Seafood Exporters and Producers: www.vasep.com.vn

this year. MAE reported that approximately 650,000 hogs were culled in the first eight months of 2025 across 33 provinces. Moreover, consumers are shifting to poultry instead of pork due to concerns over ASF-contaminated pork, slowing hog repopulation. An industry contact predicts that hog population growth will remain at the same level as in 2024.

Post maintains the total feed demand estimate at 27.5 million tons for MY2024/25, reflecting expected higher demand for aquafeed, and projects an increase to 28.5 million tons in MY2025/26 due to anticipated growth in animal production.

In Vietnam, protein meals used for feed production are price sensitive. SBM is the primary protein source in all aqua and animal feed formulations, accounting for 15 to 35 percent of total ingredients. Domestic SBM prices have continuously decreased, encouraging feed mills to increase SBM inclusion in feed formulas as a substitute for other meals. High SBM stocks are projected in 2025 due to increased imports. As a result, Post revises SBM feed consumption upward to 7.20 million metric tons in MY2024/25, with a further increase to 7.60 million tons in MY2025/26, reflecting projected total feed demand.

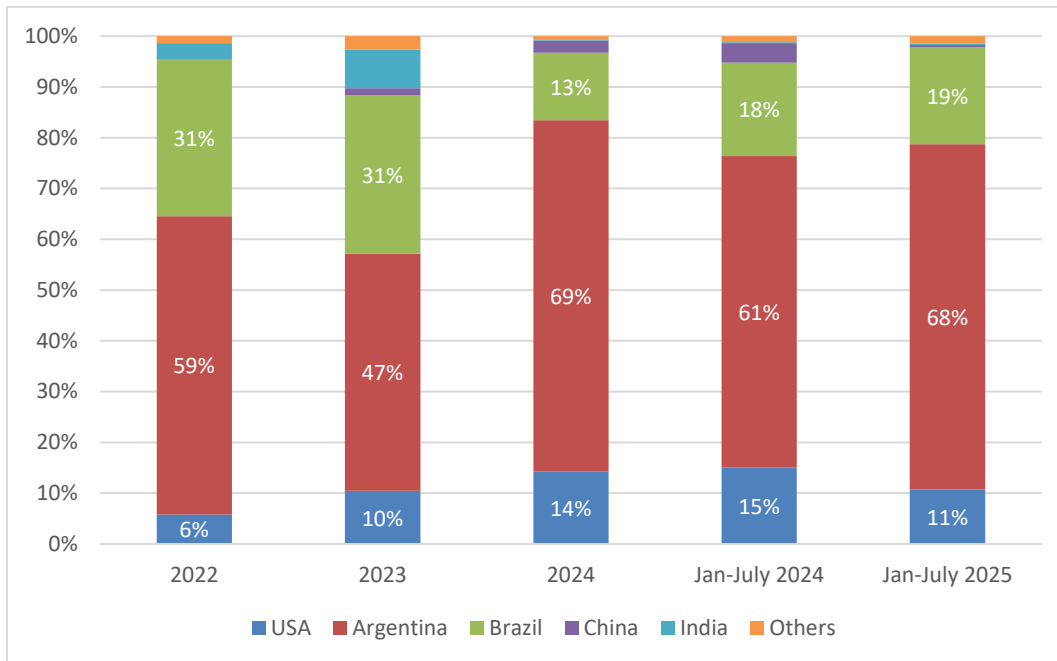

Trade

Imports

Post revises SBM imports for MY 2024/25 at 6.5 million tons and decreases to 6.2 million tons in MY 2025/26 due to new crush facilities coming online, raising local production of SBM.

According to TDM, as of July 31, 2025, Vietnam imported 3.75 million tons of SBM, an increase of 14.5 percent compared to the same period of the previous year.

Table 11: Total Soybean Meal* Suppliers Market Share 2020-2025

Source: TDM data

**Note: Soybean meal (HS code: 2304), and other residues from soybeans (HS Code: 230250), and soy flour (HS code 120810)*

Exports

According to AgroMonitor¹¹, as of August 31, Vietnam exported 144,000 tons of SBM, increased twice compared to the same period the previous year. Cambodia continued to be Vietnam's main export market as Cambodia lacks a port, making it costly to import SBM directly from other international sources.

Post revises its forecast for SBM exports in MY2024/25 upward to 200,000 tons, driven by increased demand from Cambodia and other ASEAN countries, and maintains the forecast at 200,000 tons in MY2025/26 due to projected higher soybean availability for crushing.

Policy

On March 31, 2025, the Government of Vietnam (GVN) issued Decree 73/2025/ND-CP, revising and amending certain provisions of Decree 26/2023 regarding export tariffs, preferential import tariffs, product lists, flat tariffs, compound tariffs, and out-of-quota import tariffs. The decree entered into force immediately. Vietnam has eliminated the most-favored-nation (MFN) tariffs on corn and soybean meal. The MFN tariff rates apply to the United States. See GAIN [Report VM2025-0014](#) for details.

¹¹ AgroMonitor: A local commodities analysis entity: www.agromonitor.vn

Other Meals

Production

Post revises its forecast of copra meal production at 8,000 tons for both MY2024/25 and MY2025/26, based on the estimated volume of coconut oil exports.

Trade

Imports

According to TDM, as of July 2025, Vietnam's rapeseed meal imports totaled 215,000 tons, an increase of 12 percent compared to the same period of the previous year. India is the largest supplier of rapeseed meal to Vietnam. Post revises rapeseed meal imports up to 250,000 tons in both MY 2024/25 and MY 2025/26 in line with projected feed demand.

As of June 2025, copra meal imports amounted to 27,000 tons in MY 2023/24, an increase of 22 percent compared to the same period of the previous year. Post keeps copra meal imports estimates at 60,000 tons in both MY 2024/25 and MY 2025/26, following the estimated total feed demand and due to its low price.

Exports

Vietnam exported about 5,000 tons of copra meal, as of July 2025, India is the main importer.

OILS SITUATION AND OUTLOOK

Production

Post revised Vietnam’s total refined vegetable oil production estimates at 1.7 million tons in MY 2024/25 and rising to 1.75 million tons in MY 2025/26 due to increases in crushing capacity, domestic consumption, and exports.

Post forecasts local soybean oil production at 323,000 tons in MY 2024/25, increasing to 399,000 tons in MY 2025/26 to reflect the projected increase in soybean crush volume. Rice bran oil production is also forecast to increase. According to sources in the oil industry, rice bran oil is in high demand for home cooking due to its quality and competitive price. However, processors face challenges related to seasonality, as they rely on sourcing fresh rice bran for processing after the rice harvest and milling.

Table 12: Refined Vegetable Oil Production in Vietnam

Year	2022	2023	2024	2025*	2026*
Refined vegetable oil (TMT)	1,452	1,560	1,670	1,700	1,750

Source: NSO, *Post estimates and local producers

Post maintains the peanut oil production estimate at 9,000 metric tons in both calendar years 2025 and 2026. Peanut oil is traditionally used in some provinces in central Vietnam, with most crushing occurring at the household level. However, the domestic price of peanut oil is not competitive with other vegetable oils used for household cooking, industrial canteen cooking, or food service. Currently, domestic peanut oil costs about \$4-5 USD per liter, while other vegetable oils range from \$1.50 to \$2.50 USD per liter.

Food Consumption

Vietnam is a price-sensitive market. Post forecasts increased use of both palm oil and soybean oil in the food service and food processing sectors in MY 2024/25 and MY 2025/26, as the tourism and services sectors continue to expand.

Trade

Imports

Table 13: Imported Vegetable Oils to Vietnam (thousand metric tons - TMT)

Year	2022	2023	2024	2025*	2026*
Palm oil	995	1,110	1,073	1,140	1,200

Soy oil	56	78	81	80	80
Rapeseed oil	4	7	14	8	8
Coconut oil	4	4	4	4	4

Source: TDM

* Post estimates

Post forecasts palm oil imports to remain at 1.14 and 1.20 million tons in both MY 2024/25 and MY 2025/26 respectively, driven by higher consumption in food processing and food service. According to TDM, Vietnam imported 576,000 tons of palm oil in the first seven months of 2025, a 6% increase from the same period of the previous year due to increased higher local consumption. The main suppliers of palm oil are Indonesia and Malaysia.

Post expects soybean oil imports to remain at 80,000 tons in both MY 2024/25 and MY 2025/26, driven by local consumption. TDM reports that Vietnam imported about 48,000 tons of soybean oil in the first seven months of 2025, a 44% increase from the same period the previous year.

Post forecasts rapeseed oil imports to decline to 8,000 tons in both MY 2024/25 and MY 2025/26 due to high prices. TDM indicates that Vietnam imported about 4,500 tons of rapeseed oil the first seven months of MY2024/25, a 50% decrease from the same period of the previous year due to its competitive pricing. Australia and Japan are the main suppliers.

Exports

According to TDM, as of July 31, Vietnam exported 88,000 metric tons of soybean oil globally, with South Korea as the main importer. Post revises the forecast for soybean oil exports upward to 120,000 tons in MY2024/25, with a further increase to 140,000 tons in MY2025/26, driven by expected growth in domestic soybean oil production.

Post projects palm oil exports to grow to 100,000 tons in MY 2024/25, with Cambodia and India being the main export markets.

Vietnam also exported 10,000 tons of coconut oil in the first seven months of MY2024/25, a 68% increase driven by higher demand in export markets, including the U.S., Canada, EU27 and the United Kingdom. Post revises the forecast of coconut oil exports increasing to 16,000 tons in both MY 2024/25 and MY 2025/26, due to anticipated higher demand in export markets.

Table 14: Vietnam Exported Vegetable Oils to global (thousand metric tons - TMT)

Year	2022	2023	2024*	2025*	2026*
Palm oil	92	90	100	100	100
Soy oil	59	84	78	120	140
