Oilseeds and Products Update - Bumper Rapeseed Crop

Report Categories:

Oilseeds and Products

Approved By:

Dwight Wilder, Agricultural Attaché

Prepared By:

Denys Sobolev, Agricultural Specialist

Report Highlights:

Ukraine's Ministry of Agriculture reported the MY2017/18 oilseeds harvest has concluded. Production levels were set as follows: sunflower seeds 15-percent lower compared to the previous MY; soybeans – 12-percent lower; and rapeseed – 83-percent higher. Ukraine remains one of the leading exporters in the region. Recent changes in tax legislation and excess crush capacity will likely encourage additional processing activity and lead to higher exports of processed products (oils and meals) vis-a-vis unprocessed oilseeds.

Production:

For general information about oilseed production and trade in Ukraine please refer to our previous annual [GAIN Report UP1706](#).

According to a recent report by the Ministry of Agricultural Policy and Food of Ukraine (MAPFU) farmers concluded harvesting oilseeds as of December 1, 2017, and production volumes are as follows: sunflower seeds – 11.6 million metric tons (MMT), almost 15-percent down compared to the previous year; soybeans – 3.8 MMT, 12-percent down; and rapeseed – 2.2 MMT, 83-percent up.

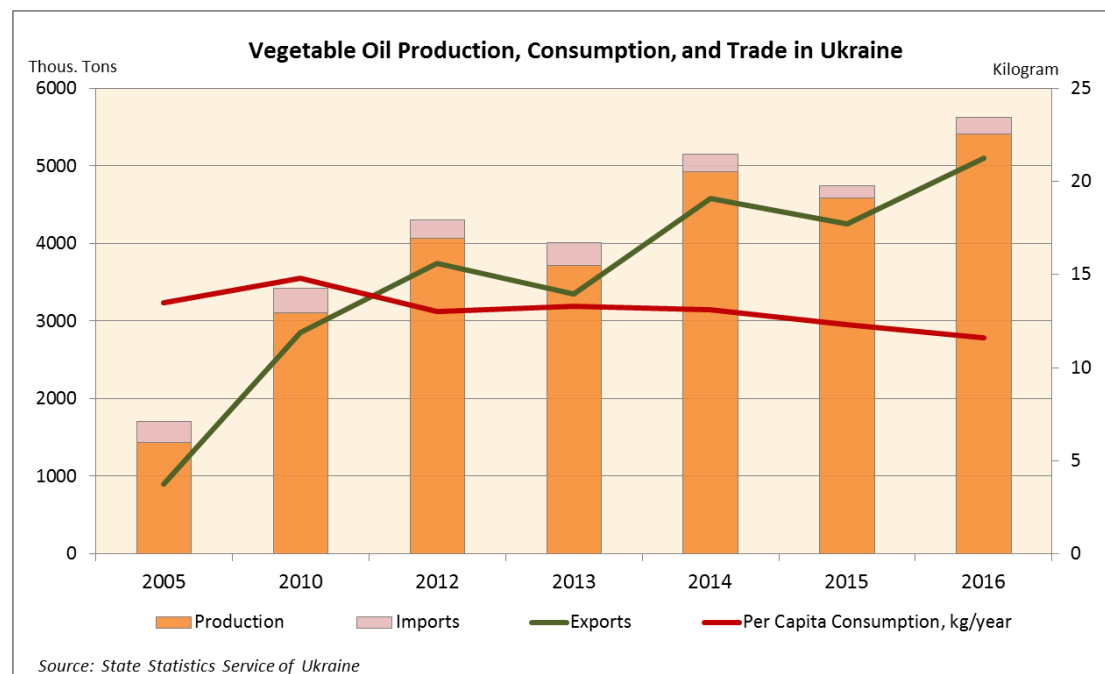

These numbers were used by FAS Kyiv to adjust production volumes for the mentioned crops in its Production Supply and Distribution (PSD) tables for marketing year (MY) 2017/18.

Consumption:

Almost 100 percent of sunflower seeds harvested in Ukraine are processed internally. Processors report lower oil content of sunflower kernels for MY2017/18 compared to the previous MY. This is reflected by FAS-Kyiv's revised forecast, lowering expected volume of sunflower oil production for MY2017/18 in the relevant PSD.

Soybeans and rapeseed are both exported as unprocessed bulk commodities, and processed domestically into meal and oil, which is then exported. On December 7, 2017, the Ukrainian Parliament adopted the State Budget for 2018 which will abolish value added tax (VAT) refunds (note: standard VAT rate is 20 percent) for exports of unprocessed soybeans, rapeseed and sunflower seeds after March 1, 2018. This change could tip the scales from exporters of oilseeds in favor of processors that export oils and meals. Among the oilseeds affected, the larger impact of this change will be felt in MY2017/18 by soybean exporters, which typically ship between 30 to 50 percent of total exportable amounts between March to September (the end of the MY for soybeans). The impact on rapeseed exporters will likely be minimal, as less than 10 percent of rapeseed is typically exported between March to June (end of MY for rapeseed). FAS Kyiv will continue monitoring the situation and adjust PSDs accordingly.

The State Statistical Service of Ukraine's (SSSU) reported the following production volumes: sunflower oil – 6 MMT; soybean oil – 164 thousand MT; and rapeseed oil – 60 thousand MT for MY2016/17. Food use for sunflower oil in the PSD table (please refer to the relevant section of the report) has been decreased based on the SSSU's data indicating a gradual decrease in per capita vegetable oil consumption in the country (please refer to the Vegetable Oil Balance graph below for more details).

FAS-Kyiv increased the forecast crush numbers both for soybeans and rapeseed for MY2017/18, based on a combination of excess domestic crush capacity (over 17 MMT) and lower harvest numbers for sunflower seed. This scenario assumes that the difference between world market prices for oilseeds and processed products (oils/meals) will allow for the domestic crushing industry to have favorable margins and remain competitive with oilseed exporters.

The SSSU reports a mixed picture for animal stock numbers in the country: a 10-percent decrease in the pig herd and a 1-percent increase for poultry from December 2016 to November 2017. The economic situation in the country does not suggest a foreseeable increase in domestic consumption of products of animal origin for 2017 and 2018. However, the increased poultry production is driven by export demand. Moreover, reports of the local Veterinary Service on continued outbreaks of African Swine Fever suggest a further decrease of pig herds in 2018. On these grounds, Post lowered cumulative feed consumption of oilseed meals (sunflower and soybean) in its PSDs.

FAS-Kyiv increased consumption of palm oil for MY2017/18, due to the small but steady recovery of the national economy in 2017, which will likely translate into increased consumer confidence and higher consumption of processed food products.

Trade:

Estimated oilseed export numbers for MY2016/17 have been revised based on reports of the State Fiscal Service of Ukraine (SFSU) (please refer to Statistical Tables at the Author Defined section of this report for more details). Increased production volumes of sunflower seeds and soybeans for MY2016/17 translated into increased export volumes of oils and meals. Exports of unprocessed soybeans and sunflower seeds have also increased.

Relatively small volumes of exports of sunflower seeds (around 191 thousand MT for MY2016/17) have occurred despite a 10-percent export duty in place in Ukraine. Sunflower seeds used in the confectionary industry presented less than 10 percent of this volume. The remaining 90-percent were kernels intended for oil extraction in the EU Member states. Based on the [EU-Ukraine Association Agreement](#), Ukraine's established preferential export duty rate for export to the EU Members States is 5.5-percent for 2017 for this commodity. FAS Kyiv believes that volumes of sunflower seeds from Ukraine to the EU will continue to grow through the end of MY2017/18, which is reflected in the relevant PSD table. This estimate is subject to revision if the change in fiscal policy regarding VAT reimbursements (please refer to the Production section for more details) has a more profound financial impact on farmers/crushers than is initially expected.

Increased production volumes of rapeseed in 2017 will likely translate into growth in exports of rapeseed as well as its oil and meal for MY2017/18.

Ukraine and China signed a new Protocol on Sanitary and Phytosanitary Requirements for Export of Sunflower Meal (please refer to [GAIN Report UP1731](#) for more details), which will likely result in growth of exports to Asian markets. Due to this development, FAS Kyiv decreased its forecast volumes of sunflower meal exports to the EU for MY2017/18.

Ukraine continues to increase imports of palm oil both for domestic consumption, which is driven by steady recovery of the national economy (please refer to Consumption section for more details) and subsequent re-exports to neighboring Russia and Moldova.
