

Voluntary Report – Voluntary - Public Distribution

Date: August 29, 2025

Report Number: UP2025-0026

Report Name: Oilseeds Update for August 2025

Country: Ukraine

Post: Kyiv

Report Category: Oilseeds and Products

Prepared By: Denys Sobolev

Approved By: Megan Francic

Report Highlights:

Post updated its marketing year (MY) 2025/26 oilseed planted area estimates on official Ukrainian data and MY2025/26 rapeseed production on actual harvest information. Ukraine is introducing 10 percent export duties for rapeseed and soybeans, which may affect the crush-to-production ratio, particularly for soybeans in MY2025/26.

Abbreviations:

CY – Calendar Year

ha – Hectare

MY – Marketing Year

MT – Metric Ton

MMT – Million Metric Ton

NDVI – Normalized Difference Vegetation Index

PSD – Production, Supply, and Distribution

SSSU – State Statistics Service of Ukraine

This report focuses on production and export forecasts for marketing year (MY) 2025/26, which runs from July 2025 to June 2026 for rapeseed and from October 2025 to September 2026 for sunflower seeds and soybeans. It also contains updated export estimates for MY2024/25 based on available trade data. For detailed information on estimates and a general overview of Ukraine's agriculture sector, as well as palm oil estimates, see our 2025 Oilseeds and Products Annual ([UP2025-0008](#)).

OILSEEDS

Production

For MY2024/25, Post updated its rapeseed production estimate to 3.7 MMT, which is higher than its previous estimate (3.6 MMT) included in GAIN Report [UP2025-0008](#). This revision is based on available final MY2024/25 export numbers for rapeseed, rapeseed oil, and meal.

Post adjusted its MY2024/25 soybean production estimate up to 7.2 MMT (previously estimated at 6.6 MMT based on SSSU data), on actual export numbers for beans and oil from September 2024 to July 2025.

For MY2025/26, recent SSSU planted area estimates are as follows:

- Soybeans – 2.1 million ha, a 24 percent decrease compared to the MY2024/25 SSSU estimate
- Rapeseed – 1.3 million ha, a 3 percent decrease
- Sunflower – 5.1 million ha, a 3 percent increase

Post accepts these numbers for soybeans and rapeseed. However, Post's sunflower area estimate (6.0 million ha) differs from SSSU's number due to the long-term historical precedent of underreporting of sunflower areas. Post's MY2025/26 updated soybean area estimate (2.1 million ha) is lower than Post's previous estimate of 3.0 million ha. The main reason for this adjustment is Ukrainian farmers decreased their soybean areas by over 500,000 ha in CY2025 and mostly reallocated the land to corn production (see GAIN Report [UP2025-0023](#)). According to industry, this was due to lower profit margins for soybeans in MY2024/25.

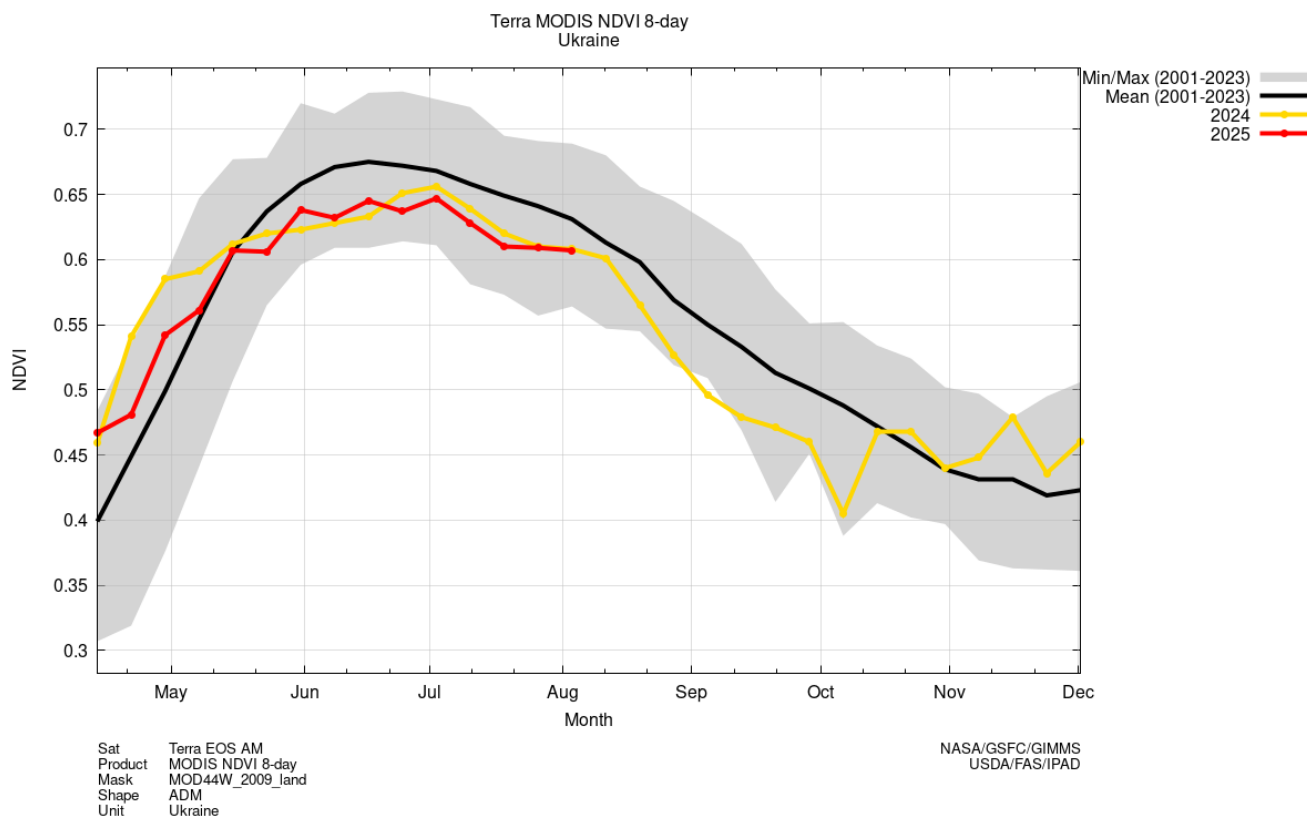

Rapeseed harvest was almost complete at the time of report writing. As of August 21, 2025, 1.3 million ha were harvested, resulting in 3.2 MMT of rapeseed, according to Ministry of Economy, Environment,

and Agriculture of Ukraine data. Based on this data, Post estimates MY2025/26 rapeseed production at 3.2 MMT, a 14 percent decrease compared to Post's estimate for the previous MY.

Post bases its MY2025/26 sunflower and soybean yield estimates on the normalized difference vegetation index (NDVI). NDVI is a standardized measure of healthy vegetation. High NDVI values indicate healthier vegetation, while low NDVI values indicate low or no vegetation. At the time of report writing, CY2025 NDVI matches the CY2024 pattern (see Figure). Therefore, Post forecasts MY2025/26 production volumes as follows:

- Soybeans – 4.9 MMT, a 31 percent decrease compared to Post's estimate for the previous MY
- Sunflower Seed – 12.7 MMT, similar to the previous MY

NDVI for Ukraine

Trade

MY2024/25 has concluded for rapeseed. Post updated export and import estimates in the PSD below.

Post updated MY2025/26 export estimates on new production estimates for sunflower seeds, soybeans, and rapeseed.

Crush

The Ukrainian Parliament enacted a 10 percent export duty for rapeseed and soybeans (see Policy section). However, Post expects this change will have a limited impact on the crush-to-production ratio for soybeans for the remainder of MY2024/25, as available trade data (September 2024 – July 2025) currently suggests minimal stocks on the domestic market.

For MY2025/26, Post increased its crush-to-production ratio for soybeans against the previous MY and retains a similar crush-to-production ratio for rapeseed.

Policy

On July 16, 2025, the Ukrainian Parliament approved a [draft law](#) (in Ukrainian) introducing 10 percent export duties on rapeseed and soybeans from Ukraine. At the time of report writing, it was not yet signed into law. Industry notes these duties would mostly fall on international traders, as the bill exempts farmers and cooperatives from the tax. Note that many Ukrainian exporters also qualify as farmers and are therefore exempt from the duty. Ukrainian oilseed crushers supported this draft law. The crushing industry has been expanding its capacity and is eager to support policies that direct more of Ukraine's oilseed crops toward domestic crushing and away from export markets. While the bill places export duties on whole oilseeds, it does not tax exports of meals and oils. According to industry, despite not being signed into law, the draft has already had a practical impact on the market. Exporters have decreased their prices for soybeans and rapeseed offered to farmers in anticipation of paying export duties, as there is no phase-in period.
