

Voluntary Report – Voluntary - Public Distribution

Date: November 26, 2025

Report Number: ID2025-0047

Report Name: Statement Letter Necessary to Release Non-Compliant Shipments for Indonesian Export Timing Restrictions

Country: Indonesia

Post: Jakarta

Report Category: Detained Shipments, Grain and Feed, Oilseeds and Products

Prepared By: Sugiarti Meylinah

Approved By: Lisa Ahramjian

Report Highlights:

This report provides updated guidance to help U.S. exporters comply with Indonesian Quarantine Authority regulation number 14/2024, which outlines restrictions surrounding the timing of plant shipments departing U.S. ports. For any shipments that are not in compliance with the “21-day rule” in Articles 293 or 204, we strongly recommend that U.S. exporters prepare a statement letter explaining the reason for the non-compliance (e.g., rail delay or split/rolled shipment) that was outside their control. The statement letter must be presented to Indonesian Quarantine Authority officers at destination ports to release the shipments and has been an effective means of preventing trade disruptions.

On January 8, 2025, the Indonesian Quarantine Authority (IQA) notified to the World Trade Organization (WTO) IQA regulation number 14/2024, “Decree of The Head of the Indonesian Quarantine Authority concerning Procedures for Integrated Quarantine and Surveillance Measures” (WTO notification G/SPS/N/IDN/154). This regulation came into effect on June 4, 2025, and applies to the importation, exportation, and distribution of animal and animal products, plant and plant products, and fish and fish products in Indonesia. It has several articles which could impact U.S. agricultural exports to Indonesia, originally reported in [ID2025-0011](#). In addition, [ID2025-0020](#) outlined updated guidance for U.S. exporters to comply with IQA regulation number 14/2024’s requirements for exporters to submit a notification in IQA’s Prior Notice system on the day the shipment departs and to meet export timing requirements.

This report provides updated guidance to help U.S. exporters of plant products comply with the export timing requirements in IQA regulation number 14/2024. The requirements in Articles 293 and 294 are translated below, with updated guidance in blue boxes in each section:

Article 293

The plant health certificate in the printed form as intended in Article 292 (a) is stated true and valid, if:

- a. issued by the NPPO of the country of origin and/or transit country.
- b. published in the format according to the notification format at the origin and/or transit country.
- c. contains clear and complete QPPO Carrier Media information in accordance with the standards set by International Plant Protection Convention (IPPC)
- d. legible and not damaged.
- e. issued before the QPPO Carrier Media is shipped from the country of origin and/or transit country; and
- f. delivery of QPPO Carrier Media from the country of origin and/or transit countries do not exceed 21 (twenty-one) days from the issuance date of the plant health certificate.

Updated Guidance: If Phytosanitary Certificate Issued Before the Shipment Departs – (Article 293)

IQA clarified in writing that if the phytosanitary certificate is issued before the shipment departs a U.S. port, the vessel must depart within 21 days of the phytosanitary certificate’s issuance. While the IQA regulation itself does not place any restrictions in relation to the inspection date, the USDA Animal and Plant Health Inspection Service requires that the phytosanitary certificate be issued within 30 days of the phytosanitary inspection.

For any shipments not in compliance with Article 293, U.S. exporters are strongly recommended to complete a statement letter explaining the reason for the incompliance (i.e., the circumstances outside their control that caused the shipment to not comply). The statement letter must be presented to IQA officers at destination ports in Indonesia to release the shipments and have been an effective means of preventing trade disruptions.

Article 294

- (1) In terms of issuing plant health certificates conducted after the QPPO Carrier Media departs from the country of origin and/or transit country, it must include the completion date of the quarantine inspection on the plant health certificate.

- (2) The certificate as intended in paragraph (1) is declared invalid if the QPPO Carrier Media's departure from the country of origin and/or transit country exceeds 21 days from the date of completion of the quarantine inspection.

Updated Guidance: If Phytosanitary Certificate Issued After the Shipment Departs – (Article 294)

IQA clarified in writing that if the phytosanitary certificate is issued after the shipment departs a U.S. port, the shipment must depart within 21 days of the phytosanitary inspection. The phytosanitary inspection date must be stated on the phytosanitary certificate in the “additional declaration” field.

For any shipments not in compliance with Article 294, U.S. exporters are strongly recommended to complete a statement letter explaining the reason for the incompliance (i.e., the circumstances outside their control that caused the shipment to not comply). The statement letter must be presented to IQA officers at destination ports in Indonesia to release the shipments and have been an effective means of preventing trade disruptions.
