

Required Report: Required - Public Distribution

Date: December 04, 2025

Report Number: IN2025-0058

Report Name: Oilseeds and Products Update

Country: India

Post: New Delhi

Report Category: Oilseeds and Products

Prepared By: Shilpita Das, Agricultural Specialist

Approved By: Joanna Brown, Agricultural Attaché

Report Highlights:

India's peanut oilseed harvested area for marketing year (MY) 2025/26 is projected to reach 5.6 million hectares, a three percent increase, as farmers shift from cotton to peanuts due to better financial returns and timely rainfall. Production is forecasted to grow two percent to 7.5 million metric tons (MMT), with stable yields of 1.33 metric tons per hectare, supported by favorable monsoon conditions. Exports are expected to rise 16 percent to 928 thousand metric tons (TMT), driven by global trade opportunities and the India-UK Free Trade Agreement. Ending stocks are anticipated to increase five percent to 500 TMT, potentially lowering market prices. Peanut oilmeal production and consumption are projected to remain unchanged at 1.8 MMT and 1.7 MMT, respectively, while peanut oil production is estimated to hold steady at 1.4 MMT.

Data source for oilseed table: OAA New Delhi historical data series. Post forecast for 2025/26; 2024/25 and 2023/24 are estimates.

Area Harvested and Production: FAS New Delhi revises India's peanut oilseed harvested area for the 2025/26 marketing year (MY) upward to 5.6 million hectares (MHa), marking a three percent increase from the earlier estimate of 5.5 MHa. See Table 1. This adjustment reflects timely rainfall during the sowing season and a shift from cotton cultivation to peanuts, driven by higher financial returns achieved by growers in MY 2024/25. Peanut production is also revised upward to 7.5 million metric tons (MMT), a two percent increase from the initial projection of 7.4 MMT. See Table 1 and Figure 1. Gujarat and Rajasthan continue to lead peanut production, with expanded acreage attributed to favorable price realizations in the previous year. The shift towards peanut cultivation compensates for reduced cotton acreage, which declined due to lower price realizations for cotton amid competition from cheaper Brazilian varieties (for more information, see [Oilseeds and Products Annual - IN2025-0021](#)). Yields are expected to remain stable at 1.33 MT/Ha, supported by favorable conditions anticipated for the 2026 southwest monsoon.

Figure 1: Peanut field and crops in leading growing areas

Source: FAS crop survey in Gujarat and Rajasthan – September 2025

Prices and Government Support: In May 2025, the Indian government increased the Minimum Support Price (MSP) for peanuts by seven percent to \$83/quintal (INR 7,263/quintal), reflecting its commitment to supporting farmers and stabilizing the domestic peanut market. During the 2024/25 marketing year (MY) (October through September), average market prices for peanuts hovered around \$75/quintal (INR 6,550/quintal), with peak prices reaching \$115/quintal (INR 10,000/quintal). These prices closely aligned with the MSP set for MY 2024/25 at \$78/quintal (INR 6,783/quintal), incentivizing increased peanut acreage during the current MY. However, traders are expressing concerns that if market prices fall below the newly raised MSP, farmers may face inadequate returns, potentially reducing peanut acreage in the next planting season. Industry sources emphasize that government procurement will be pivotal in stabilizing prices amid this year's abundant supply, ensuring farmers remain motivated to cultivate peanuts.

Export Procedures and Market Dynamics: On January 24, 2025, the Indian government updated export procedures for peanuts and peanut products (PPP), effective November 1, 2025, to strengthen compliance with international quality and safety standards. Issued by the Agricultural and Processed Food Products Export Development Authority (APEDA), these measures aim to meet importing countries' requirements for aflatoxin levels and quality standards. The updated procedures require exporters to register with APEDA, obtain aflatoxin certification from approved laboratories, and ensure accurate marking and labeling of consignments.

A key feature of the updated system is [the Peanut.Net platform](#), an internet-based service provided by APEDA to facilitate testing and certification for exports. Peanut.Net collects, stores, and reports traceability and quality assurance data entered by stakeholders, including exporters, laboratories, and authorities in the peanut supply chain. While APEDA oversees the platform's

functionality, stakeholders are solely responsible for verifying and validating the accuracy of the data and certifications they input. By leveraging Peanut.Net, the government aims to streamline trade operations, enhance transparency, and reduce paperwork, positioning India as a reliable supplier in global markets. These updates build on earlier measures introduced in 2013 and revised in 2015, reflecting the government's ongoing efforts to align Indian peanut exports with international standards.

Market Influence & Key Trading Partners: Despite government efforts to improve quality compliance and market access, India's peanut exports declined by 9.4 percent from January to July 2025 compared to the same period in 2024. Key trading partners, including Indonesia, Vietnam, the Philippines, Malaysia, and Thailand, reported negative growth during this period, with Vietnam (-22 percent), the Philippines (-32 percent), and Malaysia (-22 percent) experiencing significant declines. However, India's exports to China surged dramatically by 2,252 percent, marking a major success in penetrating this market.

India and the United States, both significant peanut exporters, exhibit complementary trade dynamics. While India primarily targets Asian and Middle Eastern markets, the U.S. focuses on North America, Europe, and select Asian countries. For instance, U.S. exports are concentrated in destinations like Mexico, Canada, the Netherlands, China, and Japan, whereas India's exports are focused on Southeast Asia, including Indonesia, Vietnam, the Philippines, Malaysia, and Thailand. This geographic differentiation reduces direct competition and creates opportunities for collaboration to meet global demand for high-quality peanuts.

However, overlap exists in markets like China and the United Kingdom, where both countries compete for market share. Notably, India's exports to China surged by 2,252 percent in 2025, while U.S. exports to China declined by 68 percent during the same period, highlighting India's growing presence in this critical market.

Despite challenges, India remains a key player in the global peanut trade, supported by higher MSPs and streamlined export procedures. These measures are bolstering confidence among farmers and traders, ensuring market stability and competitiveness.

Consumption - Crushing, Food and Feed Use: India's peanut crushing is projected to remain steady at 4.2 MMT, a five percent increase from the previous MY due to higher production. Food and feed use consumption is also expected to remain unchanged at 1.8 MMT and 600 thousand metric tons (TMT), respectively.

Peanuts, both shelled and de-shelled, continue to gain popularity as a versatile snack in Indian households, enjoyed in savory dishes and as standalone snacks. In Gujarat and neighboring

Rajasthan—key peanut-growing regions—peanut meal is widely used as animal feed, contributing to feed waste consumption in these areas.

Trade and Stocks: India's peanut exports are forecast to rise by 16 percent to 928 TMT, up from the initial projection of 800 TMT. This growth is driven by favorable global trade dynamics, as Indian exporters capitalize on challenges faced by U.S. peanut exports. For instance, U.S. tariffs on imports from key trade partners, including China, Canada, and Mexico, have created opportunities for Indian producers. Additionally, the India-UK Free Trade Agreement, signed in May 2025, is expected to further boost Indian peanut exports.

However, India faces challenges in maintaining its export momentum. On September 3, 2025, Indonesia, India's largest groundnut importer, temporarily halted imports of Indian peanuts due to quality concerns related to elevated aflatoxin levels. In response, APEDA has tightened export standards, aligning them with European guidelines to address aflatoxin risks and restore confidence in Indian peanuts.

Ending stocks are projected to increase by five percent to 500 TMT, up from the initial forecast of 476 TMT, reflecting higher production and increased market arrivals. See Figure 2. This rise in stock levels may contribute to lower market-yard prices.

Figure 2: Peanut market yard arrivals - 2025 harvesting

Source: FAS crop survey in Gujarat (Rajkot) market yard – September 2025

As there are no significant market developments in the remaining oilseeds, Post maintains the initial forecast from the 2025 annual report.

Data source for oilmeal table: OAA New Delhi historical data series. Post forecast for 2025/26; 2024/25 and 2023/24 are estimates.

Post maintains projections for peanut oil meal production at 1.8 MMT and consumption at 1.7 MMT. Manufacturers in Gujarat and Rajasthan report stable domestic feed demand, driven by the oil meal's high protein content, affordability, and increased crushing activity.

As there are no significant market developments in the remaining oil meals, Post maintains the initial forecast from the 2025 annual report.

Data source for oil table: OAA New Delhi historical data series. Post forecast for 2025/26; 2024/25 and 2023/24 are estimates.

Post maintains the peanut oil production at 1.4 MMT, reflecting a three percent increase from the previous year due to higher oilseed production. Similarly, trade and consumption projections remain consistent with the previous forecast. (Refer: [Oilseeds and Products Annual - IN2025-0021](#))

As there are no significant market developments in the remaining oils, Post maintains the initial forecast from the 2025 annual report.
