

Required Report: Required - Public Distribution

Date: April 15, 2026

Report Number: VM2026-0006

Report Name: Oilseeds and Products Annual

Country: Vietnam

Post: Hanoi

Report Category: Oilseeds and Products

Prepared By: Nguyen Linh

Approved By: Ralph Bean

Report Highlights:

Vietnam's soybean crushers have launched new production lines to expand crushing capacity. As a result, soybean imports are expected to increase, supporting higher domestic soybean meal production, while imports of soybean meal are projected to remain flat in Marketing Years (MY) 2025/26 and 2026/27.

Executive Summary

Vietnam's economy continues to demonstrate strong growth, with GDP expanding by 8 percent in 2025, according to the National Statistics Office (NSO). The government maintains its objective of achieving double-digit economic growth in the coming years. Total trade surpassed USD 930 billion in 2025. Significant administrative reforms have reduced the number of government levels from four to three, consolidated provincial governments from 63 to 34, and merged ministries from 22 to 17. Vietnam plans to finalize government leadership appointments at all levels in April 2026.

Current farm-gate prices for hogs and chickens remain favorable relative to production costs, encouraging producers to rebuild herds and flocks. However, African swine fever (ASF) continues to pose a risk, requiring sustained investment in prevention and biosecurity. The sector also faces elevated catfish fingerling prices in the first half of 2026, which may constrain aquaculture production.

Vietnam has expanded its soybean crushing capacity by inaugurating two new lines in the north and south. This expansion is expected to increase domestic production of soybean meal and oil, although local soybean cultivation remains limited. As a result, soybean imports are forecast to rise to 3.2 million tons in MY 2025/26 and 3.8 million tons in MY 2026/27. Demand for soybean meal for animal and aquaculture feed is projected to reach 7.4 million tons in MY 2025/26 and 7.8 million tons in MY 2026/27, driven by higher overall feed demand.

In September 2023, Vietnam removed *Cirsium arvense* from its quarantine pest list and discontinued related inspections. In addition, effective March 31, 2025, Vietnam eliminated the Most-Favored-Nation (MFN) tariff on soybean meal imports.

The Government of Vietnam has decided to suspend implementation of Decree 46 on food safety until the Amended Food Safety Law enters into force. The amended law is scheduled to be submitted to the National Assembly for endorsement at its October session.

OILSEEDS SITUATION AND OUTLOOK

Soybean

Production

Post forecasts that Vietnam's soybean planted area will decline to 25,000 hectares in MY 2025/26, with production estimated at 41,000 metric tons (MT). The downward trend is expected to continue in MY 2026/27, with planted area projected at 24,000 hectares and production at 40,000 MT. Farmers continue to shift to more profitable crops, such as fruits and vegetables, as domestic soybeans remain less competitive than imports.

According to the NSO, Vietnam's soybean harvested area in 2025 was 26,300 hectares, with production of 43,000 MT. The decrease in both area and production reflects farmers' transition to higher-value crops, as well as adverse weather and storms in the latter half of 2025, which further reduced planting and harvesting.

Table 1: Soybean Production

	2023	2024	2025	2026*	2027*
Crop area (thousand ha)	30	27	26.3	25	24
Crop yield (MT/ha)	1.6	1.266	1.65	1.65	1.65
Total production (TMT)	48	45	43	41	40

Source: National Statistics Office (NSO), Ministry of Agriculture and Environment (MAE)¹,

The data includes inventory of winter crop in the north starting from October annually.

*Post estimates

Consumption

Industrial crush

Post forecasts that Vietnam's soybean crush will increase to 2.50 million metric tons (MMT) in MY 2025/26, supported by the commissioning of two new crushing lines at facilities in both the south and the north in the first quarter of 2026. Crush volume is projected to rise further to 3.00 MMT in MY 2026/27, reflecting continued expansion in crushing capacity.

Soybean crushing is driven by robust demand for soybean meal for animal and aquaculture feed, as well as steady demand for soybean oil.

¹ Since March 01, MARD merged with Ministry of Natural Resources and Environment into Ministry of Agriculture and Environment

Food Use Consumption

Post forecasts soybean consumption for food use in MY 2025/26 at 550,000 tons, increasing to 570,000 tons in MY 2026/27 due to continued growth in the food service and tourism sectors. According to NSO, as of December 31, 2025, total retail and services revenue in Vietnam increased by 9.2 percent compared to the same period of the previous year. Revenues from food, beverage, and lodging services rose by about 14.7%. International tourist arrivals in 2025 grew by 20.4 percent compared to the previous year, further supporting increased demand for food use soybeans.

Feed, Seed, Waste Consumption

Post maintains soybean feed consumption estimates at 240,000 tons for MY2025/26, rising to 260,000 tons in MY2026/27, in line with projected poultry and swine production growth and animal feed demand.

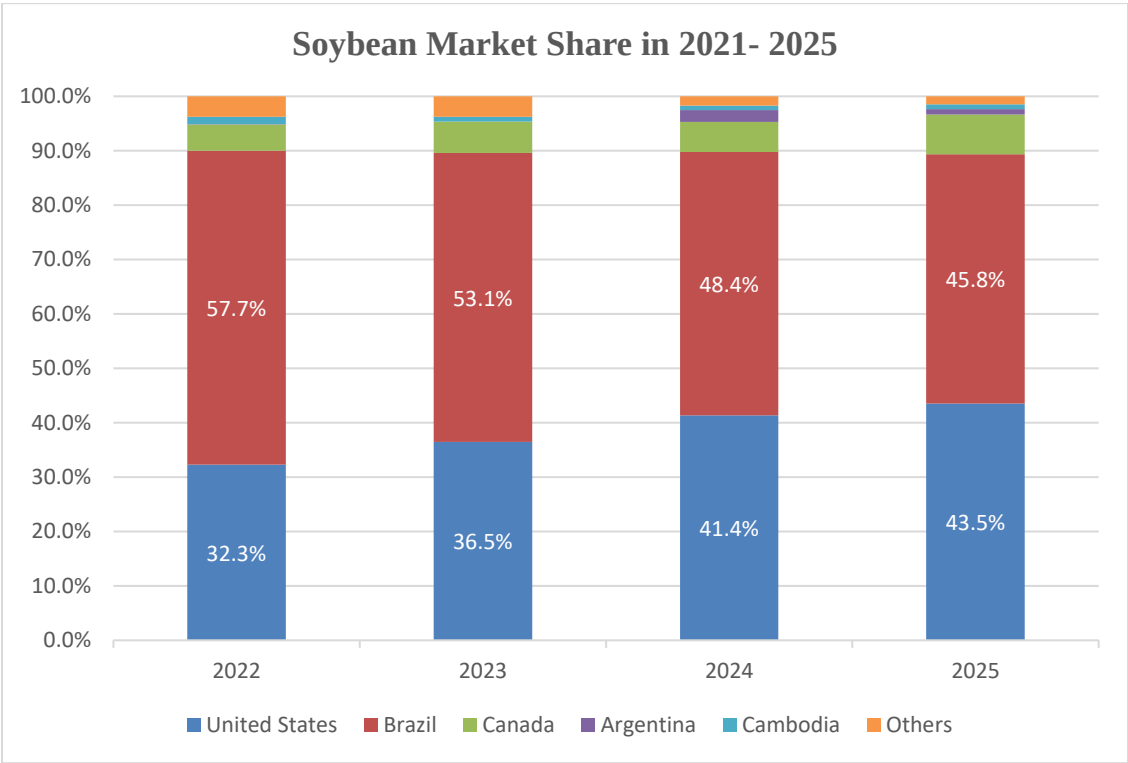

Trade

Imports

Post forecasts that Vietnam's soybean imports will increase to 3.2 MMT in MY 2025/26 and further to 3.8 MMT in MY 2026/27, driven by additional crushing capacity at facilities in both the south and the north.

According to Vietnam Customs, Vietnam imported 2.61 million tons of soybeans as of December 31, 2025, an increase of 17.6 percent compared to the previous year. Brazil was the largest supplier, accounting for 45.8 percent of total imports, followed by the United States with 43.5 percent, and then Canada. Imports of U.S. soybeans rose by 23.8 percent year-on-year. In the first two months of 2026, Vietnam's soybean imports increased by 70 percent compared to the same period of the previous year.

Table 2: Soybean Suppliers Market Share (percentage)

Source: Vietnam Customs published at <https://www.customs.gov.vn>

Policy

On August 15, 2023, the Ministry of Agriculture and Rural Development (MARD) issued Circular 04/2023, renewing the list of quarantine pests of the Socialist Republic of Vietnam. *Cirsium arvense* is no longer listed. The Circular entered into force on September 29, 2023. After that time, MARD ceased inspections for this pest.

In January 2026, Vietnam issued Government Decree 46 on food safety which briefly but heavily impacted trade flows due to new regulatory measures and procedures. Shortly thereafter the Government of Vietnam suspended implementation of the Decree until the Amended Food Safety Law enters into force. The Amended Food Safety Law is scheduled for submission to the National Assembly’s October session for endorsement.

Peanuts

Production

Post forecasts that peanut production will decline to 380,000 tons in MY 2025/26 and 375,000 tons in MY 2026/27, based on harvested areas of 142,000 and 140,000 hectares, respectively. The reduction

reflects projected decreases in planted area as farmers shift from peanuts to more profitable crops, such as fruits and vegetables, and convert agricultural land to residential and industrial use in some provinces.

As of December 31, 2025, the NSO reported a total peanut harvested area of 144,000 hectares, a three-percent decrease compared with the same period of the previous year.

Table 3: Vietnam’s Peanut Production

	2023	2024	2025	2026*	2027*
Crop area (thousand ha)	153	146	144	142	140
Crop yield (MT/ha)	2.62	2.68	2.69	2.68	2.68
Total peanut production** (TMT)	402	390	388	380	375

Source: NSO, MARD

*Post estimate

**in-shell basis

Crush

Post maintains its forecast for peanut crush volume at 35,000 tons for both MY 2025/26 and MY 2026/27. This reflects a low estimated oil extraction rate of 0.26 due to the small scale of production and limited crushing technology. Peanut crushing occurs at the household level, based on family consumption and some small-scale processors.

Food Use Consumption

Post forecasts total peanut consumption increasing to 545,000 tons in MY2025/26, further increasing to 550,000 tons in MY2026/27, due to the expected continued growth of tourism, processing, and the service sector.

Most locally produced and imported peanuts are consumed through retail sales channels, food service, and the food processing industry (especially the snack industry) for both domestic consumption and export.

The growth of the tourism sector, along with restaurants, foodservice providers, street vendors, wholesale and wet markets, and small retail stores, is projected to drive an increase in domestic consumption of in-shell and shelled peanuts.

In-shell peanuts are available from street vendors in boiled and roasted forms, at “Bia hoi” (fresh draft beer) restaurants, and in wet markets during harvest season. Several "Bia hoi" restaurants in Hanoi and Ho Chi Minh City have closed due to reduced demand for dining out, caused by the zero-tolerance alcohol policy for drivers. Small retail stores typically sell raw shelled peanuts in bulk, while modern

retailers, such as supermarkets and hypermarkets, offer packaged raw shelled peanuts. Foodservice providers and food processors typically buy peanuts in bulk.

Trade

Imports

Post forecasts Vietnam’s peanut (in-shell basis) import forecast upward to 270,000 tons for both MY2025/26 and MY2026/27, reflecting projected declines in local production and growth in consumption.

According to Vietnam Customs, as of December 31, 2025, Vietnam imported 180,000 tons of peanuts (in-shell basis), a decline of about 20 percent compared with the previous year. India was the leading supplier, accounting for 62 percent of total market share. The decrease in imports of shelled peanuts reflects reduced re-exports, as Vietnam primarily imports shelled peanuts for processing and subsequent re-export to China and Cambodia.

According to Trade Data Monitor (TDM), global exports of prepared and preserved peanuts (HS code 200811) to Vietnam totaled about 4,000 tons (in-shell basis) in 2025. Peanut butter exports to Vietnam were negligible. China and Thailand were the main suppliers.

Table 4: Vietnam’s Peanut Imports, by HS code

Year	2022	2023	2024	2025
Total in-shell peanut (MT) (HS code 120241)	2,319	2,324	1,668	4,912
Total shelled peanut (MT) (in-shell basis) (HS code 120242)	215,127	352,846	223,410	174,855
Total peanut imports (in-shell basis) (MT)	217,446	355,081	225,078	179,767

Source: Vietnam Customs and Post’s calculation

*Note: Conversion rate from shelled peanut into in-shell peanuts: 1.33.

Exports

Post forecasts that peanut exports (in-shell basis) will increase to 50,000 tons in both MY 2025/26 and MY 2026/27, driven by higher projected demand in key export markets, particularly China.

According to Vietnam Customs, as of December 31, 2025, Vietnam exported 29,000 tons of in-shell peanuts. Cambodia was the largest importer, accounting for 57 percent of total exports, followed by China with 16 percent.

According to TDM, Vietnam exported about 2,400 tons of prepared and preserved shelled peanuts (HS code 200811) in MY 2024/25, an increase of 31.5 percent compared with the previous year.

Table 5: Vietnam Peanut Exports, by HS Code 200811

Year	2022	2023	2024	2025
Shelled peanut exports (MT) (<i>HS code 200811</i>)	1,816	1,364	1,792	2,391
Peanut exports (in-shell basis) (MT)	2,415	1,814	2,383	3,180

Source: TDM²

Note: Peanuts are on an in-shell basis, including shelled peanuts HS code 200811 excluded peanut butter.

Conversion rate from shelled peanut into in-shell peanuts: 1.33.

Table 6: Vietnam's Peanuts Exports, by HS code

Year	2022	2023	2024	2025
Total in-shell peanut (MT) (<i>HS code 120241</i>)	2,779	4,568	4,455	3,316
Total shelled peanut (MT) (in-shell basis) (<i>HS code 120242</i>)	80,043	176,948	49,762	25,771
Peanut exports (in-shell basis) (MT)	82,822	181,516	54,217	29,087

Source: Vietnam Customs and Post's calculation

*Note: Conversion rate from shelled peanut into in-shell peanuts: 1.33.

² Vietnam is not a reported country in TDM. Throughout this report, every time TDM is noted, Vietnam exports refer to global imports from Vietnam and Vietnam imports refers to global exports reported to Vietnam.

Copra

Production

According to Viet Nam Coconuts Association³ and NSO, total coconut planting area was more than 200,000 hectares with production at 2.4 million metric tons in 2025, an increase of 4 percent compared to the previous year. Vinh Long (formerly part of Ben Tre) is the largest coconut-growing province, accounting for 60 percent of the total coconut area. As of 2024, there are 45 processors producing coconut products for export.

The coconut black-headed caterpillar (*Opisina arenosella*) was first detected in July 2020. According to a weekly pest report issued on January 8, 2026, by the Ministry of Agriculture and Environment's Plant Production and Protection Department (PPPD), approximately 57 hectares in major coconut-growing provinces have been infested. This pest damages coconut leaves and nuts and can kill trees. Another pest, *Brontispa longissima*, a leaf beetle that feeds on young leaves, affects both seedlings and mature coconut trees; PPPD reports that about 3,286 hectares of coconuts have been infested.

Post maintains its forecast that coconut planted area will increase to 202,000 hectares in MY 2025/26 and to 204,000 hectares in MY 2026/27, driven by higher expected profits compared with other crops and coconut's strong resistance to saline intrusion. Expansion is projected primarily in the southern provinces. Post forecasts harvested area at 192,000 hectares in MY 2025/26 and 194,000 hectares in MY 2026/27, reflecting the four- to five-year period required from planting to first harvest.

Vietnam's copra production is a by-product of coconut oil production, with an estimated extraction rate of 64 percent from milling copra to coconut oil.

Table 7: Coconut and Copra Production

	2023	2024	2025	2026*	2027*
Coconut planting area (thousand ha)	196	198	200	202	204

Source: MAE, NSO, TDM, Vietnam Coconut Association and Coconut Processing Companies

*Post estimates

*** Estimated extraction rate is 64 percent.

³ Viet Nam Coconuts Association: www.vietnamcoconut.org

Consumption

Industrial Use

Most local coconut processors are located in Vinh Long province (formerly part of Ben Tre), which has the largest coconut-growing area. These processors produce crude and refined coconut oil, as well as virgin coconut oil, for both domestic consumption and export markets.

Post forecasts that copra crush will increase to 31,000 tons in both MY 2025/26 and MY 2026/27, reflecting higher anticipated coconut oil production driven by expected growth in exports.

Food Use

Vietnam does not publish official production or consumption data for copra, desiccated coconut, and other coconut products. However, major coconut products for food use include fresh and mature coconuts for direct consumption and cooking, coconut milk, desiccated coconut, coconut milk powder, refined coconut oil, and coconut juice.

Other mature coconuts, including coconuts in the inner shell, are used for further processing into products such as desiccated coconut, coconut milk, coconut jelly, coconut candy, packaged coconut juices, and coconut butter. These products are sold in traditional wet markets throughout the country and exported for direct consumption.

Trade

Vietnam continues to import and export a negligible volume of copra, instead focusing on other coconut products.

Table 8: Vietnam's Coconut Product Imports

Unit: MT

Product group	2022	2023	2024	2025
Desiccated coconuts (HS code 080111)	22,524	339	2,721	3,190
Coconuts in the inner shell (Endocarp) (HS code 080112)	605	12,637	31,327	85,737
Coconuts, other than desiccated (HS code 080119)	4,375	14,095	26,112	74,489
Copra (HS code 120300)	82	178	142	523

530519; 530810)	3,605	4,220		5,756
-----------------	-------	-------	--	-------

Source: TDM and Post's calculations.

Vietnam exports a range of coconut products, including desiccated coconut, coconuts in the inner shell, coconut milk, coconut fiber, and activated charcoal. According to TDM, Vietnam's desiccated coconut exports have continued to increase over the past four years. Exports of coconut milk to Thailand and coconut juice to China have also risen.

Table 9: Vietnam's Coconut Product Exports

Unit: MT

Product group	2022	2023	2024	2025
Desiccated coconuts (HS code 080111)	19,877	24,315	26,189	21,748
Coconuts in the inner shell (Endocarp) (HS code 080112)	229,890	235,889	177,209	120,331
Coconuts, other than desiccated (HS code 080119)	60,546	73,795	164,481	61,920
Copra (HS code 120300)	1	20	-	-

Coconut milk to Thailand (HS code 21069099002/3) *	42,033	37,000	40,514	49,235
Coconut juice to China HS code 21069040)	45,137	73,419	81,539	97,551

Source: TDM

*Coconut milk exports to Thailand

On August 8, 2023, USDA's Animal and Plant Health Inspection Service (APHIS) officially notified Vietnam's Plant Protection Department that partially de-husked coconuts would be classified as a processed product. This change allows Vietnamese producers to export partially de-husked coconuts to the United States, with shipments subject to inspection at U.S. ports of entry.

In August 2024, China granted market access for Vietnamese fresh coconuts, and export volumes to this market are expected to rise.

Post forecasts that coconut product exports will increase in MY 2025/26 and MY 2026/27, supported by expanded market access and a projected economic rebound in Vietnam and the broader region.

Rapeseed

Production

There is no official data for rapeseed production in Vietnam. Rapeseed cultivation occurs mainly in the northern mountainous provinces as part of the tourism industry or for household consumption. Post continues to estimate the rapeseed planted area at 1 thousand hectares for MY2025/26 and MY2026/27⁴.

Consumption

Aside from the tourism industry, rapeseed is also used for oil extraction at the household level. Post estimates very low rapeseed consumption to continue in MY2025/26 and MY2026/27.

⁴ Marketing Year (MY) of rapeseed, rapeseed meal and rapeseed oil are from October to September.

MEALS SITUATION AND OUTLOOK

Soybean Meal

Production

Post forecasts that soybean meal (SBM) production will increase to 1.95 million tons in MY2025/26⁵ and continue increasing in MY2026/27 to 2.34 million tons. This reflects the soybean crushing volume forecast.

Table 10: Vietnam’s Soybean Meal Production

	2023	2024	2025	2026*	2027*
Total Local SBM Production (TMT)	1,015	1,093	1,482	1,95	2.34

Source: Local Producers, *Post estimate.

Feed Consumption

Vietnam has completed its government restructuring at the national, provincial, and commune levels, eliminating the district level of government. According to the NSO, Vietnam’s gross domestic product (GDP) reached USD 514 billion in 2025, an increase of 8 percent over the previous year. Nationwide elections for the National Assembly and local People’s Committees were held in March, and a new central government cabinet is expected in April. Vietnam aims to achieve double-digit economic growth in the coming years to avoid the middle-income trap. Industry sources report that, apart from higher freight costs affecting feed prices, the feed ingredient supply chain remains stable, with most imports originating from the United States, Australia, and the Black Sea region.

The Ministry of Agriculture and Environment (MAE) reported that, as of December 31, Vietnam’s swine and poultry populations increased by 0.3 percent and 3 percent, respectively, while the cattle population declined. Egg production rose by 5.3 percent. NSO data indicate that total aquaculture fish and shrimp production increased by 5 percent and 6 percent, respectively, in 2025 compared with the previous year. The Vietnam Association of Seafood Exporters and Producers (VASEP) reported that catfish and shrimp exports reached USD 2.2 billion and USD 4.6 billion, respectively, up 8 percent and 19 percent year-on-year. Local media and industry sources noted that catfish fingerling prices in the Mekong Delta have doubled, slowing restocking; this situation is expected to persist through the second quarter of 2026.

⁵ Marketing Year (MY) of SBM is from January 1 to December 31

Liveweight hog prices increased from November 2025, then declined after the Tet holiday in February 2026, and are currently around VND 65,000 per kilogram. Hog producers are realizing small margins at this price level. However, higher fuel prices have led to increased feed ingredient costs, raising concerns among producers regarding repopulation decisions. Vietnam’s annual feed ingredient demand is estimated at 22 to 24 million tons. Recently, the Department of Animal Health and Production convened a seminar to discuss strategies to address rising feed ingredient prices due to higher fuel costs. In addition to feed, piglet, and environmental compliance costs, hog producers continue to face high biosecurity expenses to prevent ASF outbreaks. MAE reported that approximately 1.2 million hogs were culled in 2025. Industry contacts forecast hog population growth of about 3 percent in 2026 compared to 2025.

Table 11: Aggregates of Protein Meals on a Soybean Meal Equivalent (SME) Basis

Unit: thousand tons

	Soybean Meal Equivalent		
	MY 2024/25	MY2025/26*	MY2026/27*
Soybean Meal	7,200	7,400	7,800
Rapeseed Meal	200	206	213
Copra Meal	27	31	33

*Post estimates

Post forecasts total feed demand at 29.5 million tons for MY2025/26, reflecting higher expected demand for animal feed, and projects an increase to 30.6 million tons in MY2026/27 due to anticipated growth in both animal and aquaculture production.

Protein meals used in feed production remain highly price sensitive. Soybean meal (SBM) is the primary protein source in all aqua and animal feed formulations, accounting for 15 to 35 percent of total ingredients. Domestic SBM prices started increasing in early 2026 which might lead to increase the compound feed. Post forecasts SBM feed consumption at 7.4 million metric tons in MY2025/26, with a further increase to 7.8 million tons, reflecting projected total feed demand.

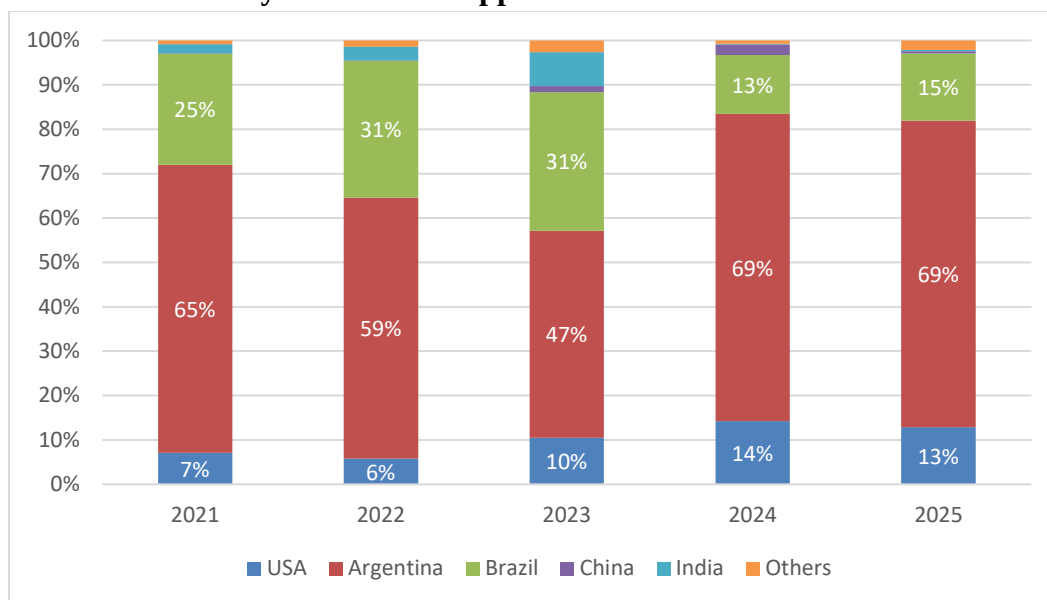

Trade

Imports

Post forecasts SBM imports for MY 2025/26 and MY 2026/27 keep flat at 5.7 million tons due to new crush facilities coming online, raising local production of SBM.

According to TDM, Vietnam imported 5.7 million tons of SBM in 2025, a decrease of 5.7 percent compared to the previous year due to higher local production.

Table 12: Total Soybean Meal* Suppliers Market Share 2021-2025

Source: TDM data

*Note: Soybean meal (HS code: 2304), and other residues from soybeans (HS Code: 230250), and soy flour (HS code 120810)

Exports

According to AgroMonitor⁶, Vietnam exported 283,000 metric tons (MT) of soybean meal (SBM) as of December 31, 2025, more than double the previous year's volume. Cambodia remained the leading destination, accounting for 70 percent of total exports. The surge in exports was driven by Cambodia's increased demand, uncertainty in its trading relationship with Thailand, and Vietnam's ample SBM stocks and competitive prices. Cambodia's lack of a seaport continues to make direct imports from other international suppliers costly, reinforcing its reliance on Vietnamese SBM.

Post forecasts SBM exports in MY2025/26 and MY 2026/27 down to 150,000 tons reflecting a return to normal stocks and pricing conditions and consistent SBM demand from export markets in Cambodia and ASEAN countries.

Policy

On March 31, 2025, the Government of Vietnam (GVN) issued Decree 73/2025/ND-CP, revising and amending certain provisions of Decree 26/2023 regarding export tariffs, preferential import tariffs, product lists, flat tariffs, compound tariffs, and out-of-quota import tariffs. The decree entered into force immediately. Vietnam has eliminated the most-favored-nation (MFN) tariffs on corn and soybean meal. The MFN tariff rates apply to the United States. See GAIN [Report VM2025-0014](#) for details.

⁶ AgroMonitor: A local commodities analysis entity: www.agromonitor.vn

Other Meals

Production

Post forecasts copra meal production upward to 11,000 tons for both MY2025/26 and MY2026/27, based on the estimated volume of coconut oil exports.

Trade

Imports

According to TDM Vietnam's rapeseed meal imports reached 281,000 tons, an increase of 22 percent compared with the previous year. India remains the largest supplier of rapeseed meal to Vietnam. Post forecasts rapeseed meal imports to rise to 300,000 tons in both MY 2025/26 and MY 2026/27, in line with projected feed demand.

As of December 31, copra meal imports in MY 2024/25 totaled 53,000 tons, up 7 percent from the previous year. Post maintains its estimate for copra meal imports at 70,000 tons in both MY 2025/26 and MY 2026/27, consistent with expected total feed demand.

Exports

Vietnam exported about 7,000 tons of copra meal in 2025. India is the main importer.

OILS SITUATION AND OUTLOOK

Production

Post revises Vietnam's total refined vegetable oil production estimate to 1.85 million metric tons (MT) for MY 2025/26, with output projected to rise to 1.95 million MT in MY 2026/27. This growth is driven by expanded crushing capacity, rising domestic consumption, and higher export demand.

Local soybean oil production is forecast at 475,000 MT in MY 2025/26, increasing to 570,000 MT in MY 2026/27, in line with anticipated growth in soybean crush. Rice bran oil production is also expected to rise. Industry sources report strong consumer demand for rice bran oil, citing its quality and competitive price for home cooking. However, processors continue to face challenges related to seasonality, as rice bran supply depends on the timing of rice harvest and milling.

Table 13: Refined Vegetable Oil Production in Vietnam

Year	2023	2024	2025*	2026*	2027*
Refined vegetable oil (TMT)	1,560	1,670	1,700	1,850	1,950

*Source: NSO, *Post estimates and local producers*

Post maintains the peanut oil production estimate at 9,000 metric tons in both calendar years 2026 and 2027. Peanut oil is traditionally used in some provinces in central Vietnam, with most crushing occurring at the household level. However, the domestic price of peanut oil is not competitive with other vegetable oils used for household cooking, industrial canteen cooking, or food service. Currently, domestic peanut oil costs about \$4-5 USD per liter, while other vegetable oils range from \$1.50 to \$2.50 USD per liter.

Food Consumption

Vietnam is a price-sensitive market. Post forecasts increased use of both palm oil and soybean oil in the food service and food processing sectors in MY 2025/26 and MY 2026/27, as the tourism and services sectors continue to expand.

Trade

Imports

Table 14: Imported Vegetable Oils to Vietnam (thousand metric tons - TMT)

Year	2023	2024	2025	2026*	2027*
Palm oil	1,110	1,073	1,140	1,200	1,200
Soy oil	78	81	90	60	40
Rapeseed oil	7	14	10	10	10

Coconut oil	4	4	4	4	4
-------------	---	---	---	---	---

Source: TDM

* Post estimates

Post forecasts that palm oil imports will increase to 1.2 million tons in both MY 2025/26 and MY 2026/27, driven by higher expected use in food processing and food service. According to Trade Data Monitor (TDM), Vietnam imported 1,076,000 tons of palm oil in 2025, essentially unchanged from the previous year. Indonesia and Malaysia are the main suppliers.

Post forecasts that soybean oil imports will decline to 60,000 tons in MY 2025/26 and further to 40,000 tons in MY 2026/27, reflecting increased domestic production. TDM reports that Vietnam imported about 90,000 tons of soybean oil in 2025, a 10-percent increase from the previous year.

Post forecasts that rapeseed oil imports will fall to 8,000 tons in both MY 2024/25 and MY 2025/26 due to high prices. TDM indicates that Vietnam imported about 4,500 tons of rapeseed oil in the first seven months of MY 2024/25, a 50-percent decrease from the same period of the previous year. Australia and Japan are the main suppliers.

Exports

Post forecasts that soybean oil exports will rise to 200,000 tons in MY 2025/26 and further to 250,000 tons in MY 2026/27, driven by expected growth in domestic soybean oil production. According to TDM, as of December 31, Vietnam exported 183,000 metric tons of soybean oil globally, with South Korea as the main importer.

Post projects that palm oil exports will increase to 100,000 tons in MY 2024/25, with Cambodia and India as the principal export markets.

Vietnam exported 10,000 tons of coconut oil in the first seven months of MY 2024/25, a 68-percent increase driven by stronger demand in export markets, including the United States, Canada, the EU-27, and the United Kingdom. Post accordingly revises its forecast for coconut oil exports upward to 16,000 tons in both MY 2024/25 and MY 2025/26, reflecting anticipated continued growth in external demand.

Table 15: Vietnam Exported Vegetable Oils to global (thousand metric tons - TMT)

Year	2023	2024	2025*	2026*	2027*
Palm oil	90	100	100	100	100
Soy oil	84	78	183	200	250
Coconut oil	8	14	16	18	20
