Oilseeds and Products Update

November 2012

Approved By:

David Leishman

Prepared By:

Amit Aradhey

Report Highlights:

Kharif season (fall harvested) soybean planted area is 4 percent higher than last year, and is expected to produce a record 11.2 million tons of soybeans in marketing year (MY) 2012/13. Winter oilseed planting is still in progress, and the latest Government of India report indicates that the rapeseed-mustard has been planted on 3.7 million hectares, up 23 percent from MY 2011/12. Adequate soil moisture from recent monsoon rains encouraged timely planting of winter oilseeds. At the same time, the total availability of oilseeds for crushing is expected to decline, and will likely push edible oil imports to a record 10.1 million tons. Increasing domestic food and feed demand for oil meals will likely reduce exports to 5.4 million tons in MY 2012/13.

Post:

New Delhi

Author Defined:**Soybean Production Expected To Reach a Record 11.2 Million Tons**

The latest progressive planting report from Government of India (GOI) Ministry of Agriculture indicates that the total *kharif* (fall and early harvested) planted area for oilseeds (soybean, peanut and sunflower^[1]) will reach 14.9 million hectares, unchanged from last year. Encouraged by the expectation of favorable returns, farmers expanded the planted area for soybean and sugarcane; however, the total crop planted area for *kharif*^[2] was 101.5 million hectares^[3], down 7 percent compared to last year. Dry weather during first-half of the monsoon season (June-September) delayed planting of major *kharif* crops. Rain conditions improved significantly in the latter half of the monsoon season, helping soil moisture conditions to recover and facilitate crop growth.

Soybeans were planted on a record 10.7 million hectares, up 4 percent over last year. An extended planting window coupled with favorable planting conditions in all major growing regions contributed to higher *kharif* season soybean acreage. Based on preliminary field assessments for Marketing Year^[4] 2012/13 (MY October -September), soybean production is forecast to reach a record 11.2 million tons, marginally higher than last year.

Kharif planting conditions were less favorable for peanuts. Based on latest available data, peanut production in 2012/13 should reach 4.7 million tons from 4.9 million hectares. Similarly, assuming normal *rabi* (winter sown) season conditions, 2012/13 sunflower production is forecast to reach 610,000 tons from 740,000 hectares, unchanged from last year.

Rapeseed-Mustard Planting Leading in North Central and Central India

The *rabi* (winter) oilseed planting is still in progress, but the latest GOI Ministry of Agriculture report indicates that the rapeseed-mustard has been planted on 3.7 million hectares^[5], up 23 percent from 2011/12. Sufficient soil moisture retained from recent monsoon rains have recharged ground water levels and have facilitated timely planting in major growing regions. Planting is progressing well in north-central and central India, while the north-western parts of the country need to accelerate planting to take advantage of optimal planting conditions before the end of November.

Edible Oil Import Will Surpass 10 Million Tons in 2012/13

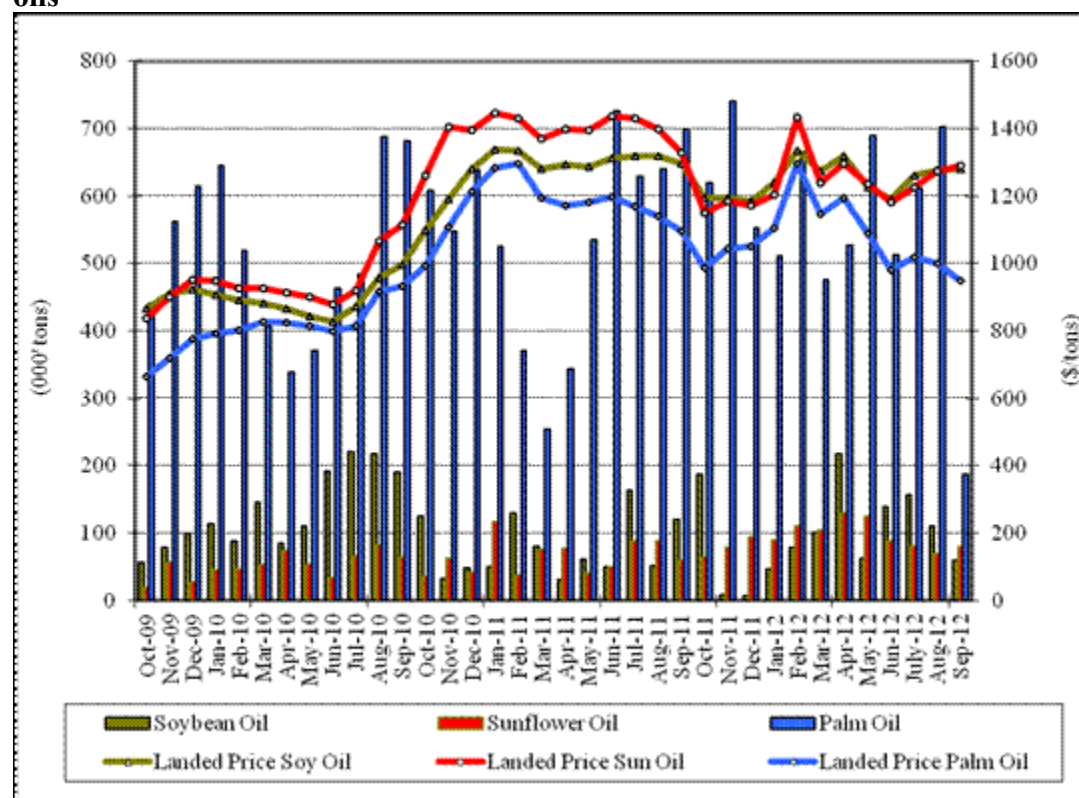

With the anticipated decline in the domestic availability of oilseeds for crushing, strong domestic demand and the continuing zero import duty on crude edible oils will push edible oil imports to record 10.1 million tons. Competitively priced oils such as palm oil will account for the largest share of the market (Figure 1). Edible oil imports will likely include 7.8 million tons of palm oil, 1.2 million tons of soybean oil, 1.1 million tons of sunflower seed oil, and 10,000 tons of other edible

oils. During MY 2011/12, India imported 9.2 million tons of edible oil, up 10 percent over 2010/11 (Table 1).

Rising Consumption Demand to Cut into Oilmeal Exports in 2012/13

Increasing domestic food and feed demand for oilmeal is expected to reduce the availability for export. Assuming Indian oilmeals remain competitively priced, total exports in MY 2012/13 are forecast to reach 5.4 million tons, unchanged from last year (*NOTE: This figure excludes rice bran, castor meal and any oilmeal sent to neighboring countries by surface transport*). Indian oilmeal exports for MY 2012/13 are forecast to include 4.4 million tons of soymeal, 1 million tons of rapeseed meal and 10,000 tons of other oilmeals. Surface transport of soymeal to neighboring nations is helping to compensate for a 13 percent decline in high sea sales (Table 2).
