# Getting Started – Accessing the System

The ICE Index Platform provides access to the entire index and constituent historical database for our index families. There are currently over 7,000 standard and customized indices compiled in local currency terms as well as converted into 45 base currencies, both hedged and unhedged. Collectively, the indices track \$100tn in debt across the global sovereign, high grade credit, high yield and emerging bond markets. Refer to the **Bond Index Methodologies** for a more complete description of the indices and calculation methodologies.

If you do not have access, register via <https://indices.ice.com/>

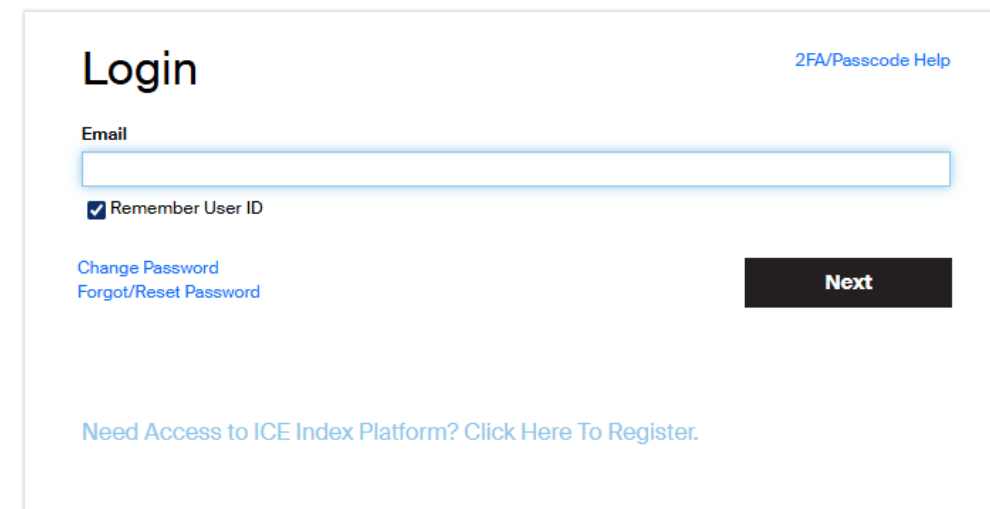

The registration page features a header with the title "ICE Index Platform Registration" and a background image of a hand holding a pen over a document with binary code. Below the header, there is a section titled "Register for:" with two options: "Full Access Trial" and "Full Access Subscription".

**ICE Index Platform Registration**

**Register for:**

- Full Access Trial**  
Request a free 30-day trial to the full functionality of the ICE Index Platform.
- Full Access Subscription**  
Subscribe to the full content of the ICE Index Platform, which includes access to all top-level and constituent data as well as powerful analytical tools to explore the rich historical data and the ability to create customized reports and data feeds.

If you have an account, sign in via <https://indices.ice.com/home>

The login page has a header with the title "Login" and a link for "2FA/Passcode Help". Below the header, there is a form with an "Email" field, a "Remember User ID" checkbox, and a "Next" button. There are also links for "Change Password" and "Forgot/Reset Password". At the bottom, there is a link for "Need Access to ICE Index Platform? Click Here To Register."

# Homepage – Real-Time Index Monitor

ICE Data Indices offers the first real-time publication of indices tracking the broad fixed income markets. Real-time fixed income offerings can be monitored alongside ICE real-time equity, commodity, and currency indices, providing a complete, multi-asset view of the markets.

A selection of those indices can be seen in a Real-Time Index Monitor on the Homepage of the ICE Index Platform.

Real-time updates for these indices are available over the ICE Consolidated Feed: <https://www.theice.com/marketdata/connectivity-and-feeds/consolidated-feed>.

# Homepage – Index Watch

Select one of several markets in the Index Watch section of the Homepage to get a performance recap for key indices within that market.

# Index Factsheets and Profiles

# Index Factsheets

A Factsheet is produced daily for each index showing characteristics and profile summaries.

The report is downloaded as a PDF format and will display relevant information for each product segment. Equity Indices are additionally broken down to sector, country and currency. Fixed Income Indices are further broken down into various segments including currency, country, rating, sector, maturity and best and worst performers.

Factsheets can be accessed through the Index Snapshot section of the homepage.

### Country Profile

# Index Profiles

A Profile is produced daily for each index showing characteristics and performance by segment. The report, which can be downloaded in PDF or Excel format, shows the number of constituents, full market value, duration, contribution to yield, spread (OAS), and Month to Date (MTD) total and excess returns.

The index is segmented by rating, maturity, duration, and sector/industry. U.S. Municipal indices are also segmented by state.

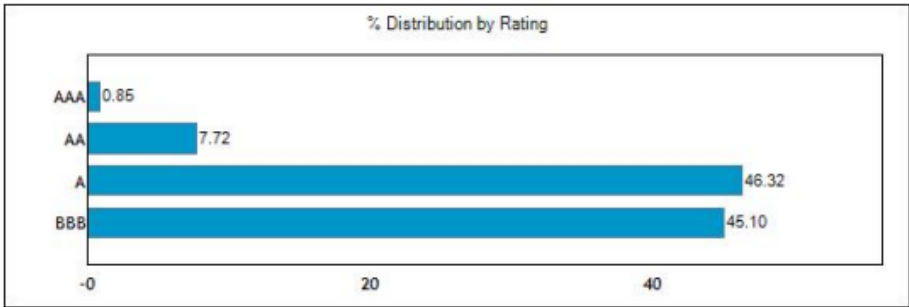

Profiles can be accessed in multiple locations throughout the system, including:

- The index snapshot section of the Homepage.
- The Profile tab of the Index Viewer.

# Index Analysis

# Index Analysis

The Index Analysis functions contain a collection of tools that you can use to analyze indices and create custom reports.

## Index Viewer

The Index Viewer is where you can view and download index characteristics, constituents, returns, sustainability metrics, and index rules.

## Security Viewer

The Security viewer is where you can look up and view or download descriptive information, pricing, spread, risk, and sector information on a selected security for a selected date, as well as a list of all indices in which the security is a constituent for the selected date.

## FX/Forward Rates

View the spot and forward currency rates used for currency and hedged return calculations. Enter an ISO currency code or use the drop down to select a base currency and enter an as of date.

## Charts

Create customized charts that integrate historical time series data for individual bonds, indices, FX rates, yield curves, and individual points on fair value yield curves. Once set up, the chart template can be saved and will automatically update when re-opened.

## Monitors

Create customized monitor pages that show risk and relative value statistics and performance data for individual bonds and indices. Once set up, the monitor can be saved and will automatically update when re-opened.

## Yield Curve Charts

Plot interest rate term structures for government, swap and corporate fair value yield and spread curves, or an historical times series for individual curve points.

## Correlation Matrix

Create custom return, price and spread correlation reports.

## Profile and Profile History

Use the Profile function to segment an index along one, two or three attributes and calculate statistics and performance data for each cell in the matrix. You can schedule a Profile analysis for automatic nightly updates. With the Profile History tool, you can run an historical time series of a Profile over a selected date range on a monthly, quarterly or annual basis.

## Index Blend/Screen

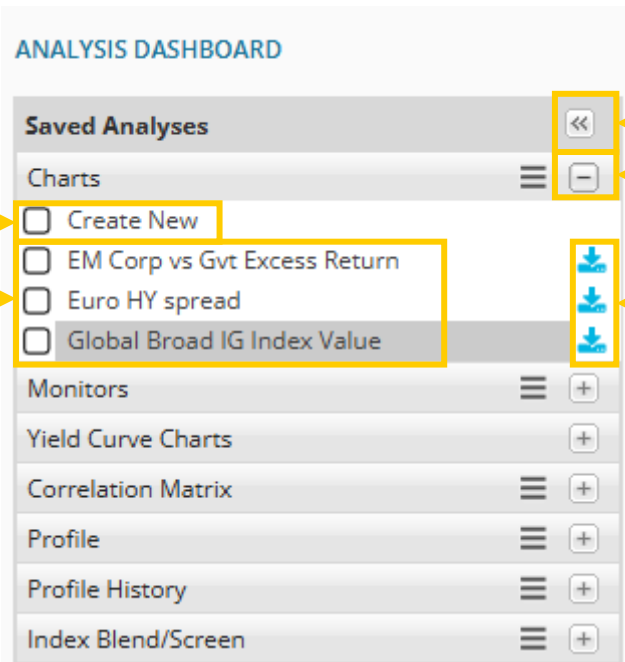

Create and back test your own custom blended and filtered indices using standard indices as your building blocks.

## Custom Index Tool

Create and run monthly or daily back-tests on custom indices using complex caps and filters. View custom index results in the other ICE Index platform functions alongside standard indices.

# Analysis Dashboard

The analysis dashboard is visible on the lefthand side of the screen when using any of the Index Analysis functions where files can be saved. It can be used to retrieve and download any of your saved files created.

The screenshot shows the 'ANALYSIS DASHBOARD' interface. It features a sidebar with sections: 'Saved Analyses', 'Charts', 'Monitors', 'Yield Curve Charts', 'Correlation Matrix', 'Profile', 'Profile History', and 'Index Blend/Screen'. The 'Saved Analyses' section is expanded, showing a list of files: 'Create New', 'EM Corp vs Gvt Excess Return', 'Euro HY spread', and 'Global Broad IG Index Value'. Annotations with yellow arrows point to specific elements: 'Click "Create New" to create a new file' points to the 'Create New' checkbox; 'Click on a file name to open the saved file' points to the 'Global Broad IG Index Value' file name; 'Click on the double left arrow button to hide the Dashboard completely' points to the double left arrow button in the top right of the 'Saved Analyses' section; 'Click on the [+] button to open a section or the [-] button to close a section' points to the minus button in the top right of the 'Charts' section; and 'Download saved files directly from the Dashboard' points to the download icon (a blue arrow pointing down) next to the 'Global Broad IG Index Value' file.

Click "Create New" to create a new file

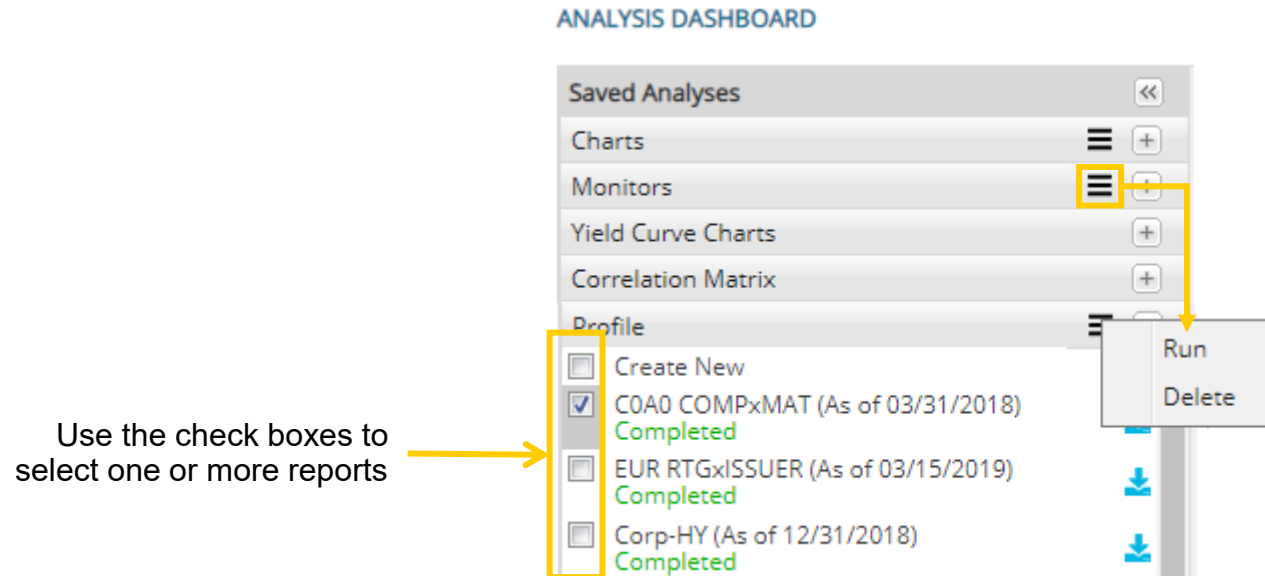

Click on a file name to open the saved file

Click on the double left arrow button to hide the Dashboard completely

Click on the [+] button to open a section or the [-] button to close a section

Download saved files directly from the Dashboard

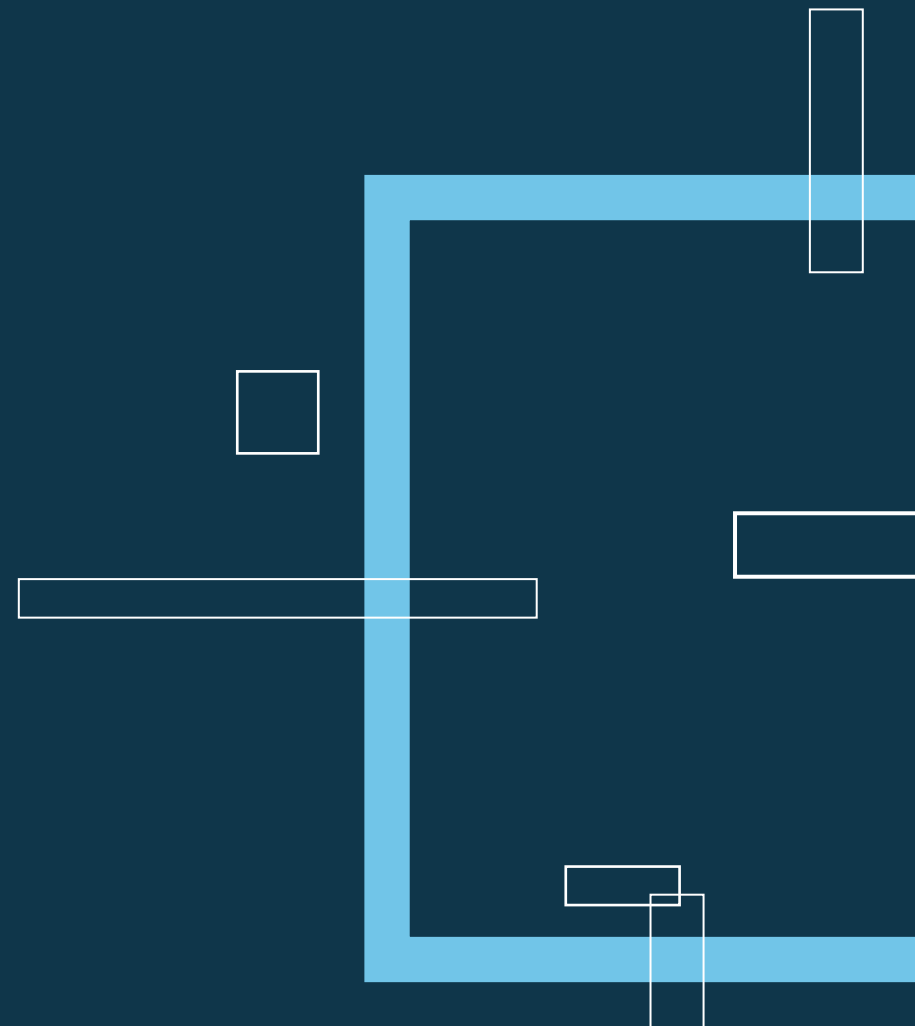

# Analysis Dashboard – Update and download options

Use the section Menus to process multiple files:

- The Profile Menu includes choices to Run or Delete files
- The Profile History and Custom Indices Menus include a choice to Bring up to date

# Index Viewer

# Index Viewer – Characteristics (month-end dates)

The characteristics tab has updated statistics for the selected index including yield, spread, duration, convexity, and many other valuations. When a month-end date is selected on the Index Viewer tool, the Index Viewer screen will show index stats for before and after the rebalancing, and the difference.

View, Download, Print

This section shows the index stats before and after the selected rebalancing date and the difference.

This section shows the index stats for the old index universe and the MTD change.

Select the base currency to be used for index values and market capitalization statistics.

# Index Viewer – Characteristics (rebalancing preview)

When a non month-end date is selected, the first two columns of the Characteristics screen are populated with projected index statistics for the upcoming rebalancing and projected change statistics. In this example, on October 27, 2025, a 0.07 year duration extension was projected for the Global Broad Market Index at the October 31 rebalancing and the projected Effective Duration for the month of November was 6.43.

(Note: projected constituents are preliminary estimates of rebalancing changes and are subject to change at the final rebalancing.)

# Index Viewer – Constituents

The constituents tab contains customizable line-item detail of all securities in the selected index on any given date. You can customize the format of this screen and save the formats under specific names.

You can create and save preset layouts with selected data fields, column order, and sort criteria. You can then save each layout and use the dropdown to select any of your saved layouts.

You can filter the constituent list based on defined criteria for one or more data field (e.g., OAS > 200bp, maturity < 5 years, etc.). Once you create a filter you can save it for future use with any selected index.

You can choose to view a current constituent universe, projected constituents (post upcoming rebalance), or a projected rebalancing changes report (a summary of additions, removals and changes within the index).

Click on a column heading to sort the list and click again to reverse the sort. The arrows show the direction of the sort and the numbers show the priority order of each sorted column.

# Index Viewer – Constituents (applying filters)

Certain data elements such as coupon and maturity date will include the options Equals, Less than or equal, Greater than or equal, and In range.

Use the Filter drop down to apply preset filters that you have created and saved.

For non-numeric fields the filter will find all matches or partial matches. For example, a “Financial” filter on Sector2 will find all bonds with a level 2 Sector of Financial. For a partial example, a “BBB” filter on composite rating returns all bonds rated BBB1, BBB2, or BBB3.

# Index Viewer – Constituents (grouping)

Use the 'Group By' drop down to summarize the index by ticker, rating, currency, country, sector, or subordination. When you use this function, you will see both the summary line for each group as well as individual line items for each bond within each group.

After the list has been grouped, click on the > arrows to expose all of the constituents for that group.

# Index Viewer – Profile

The Profile tab shows key statistics and data for the index segmented by rating, maturity, duration, and sector

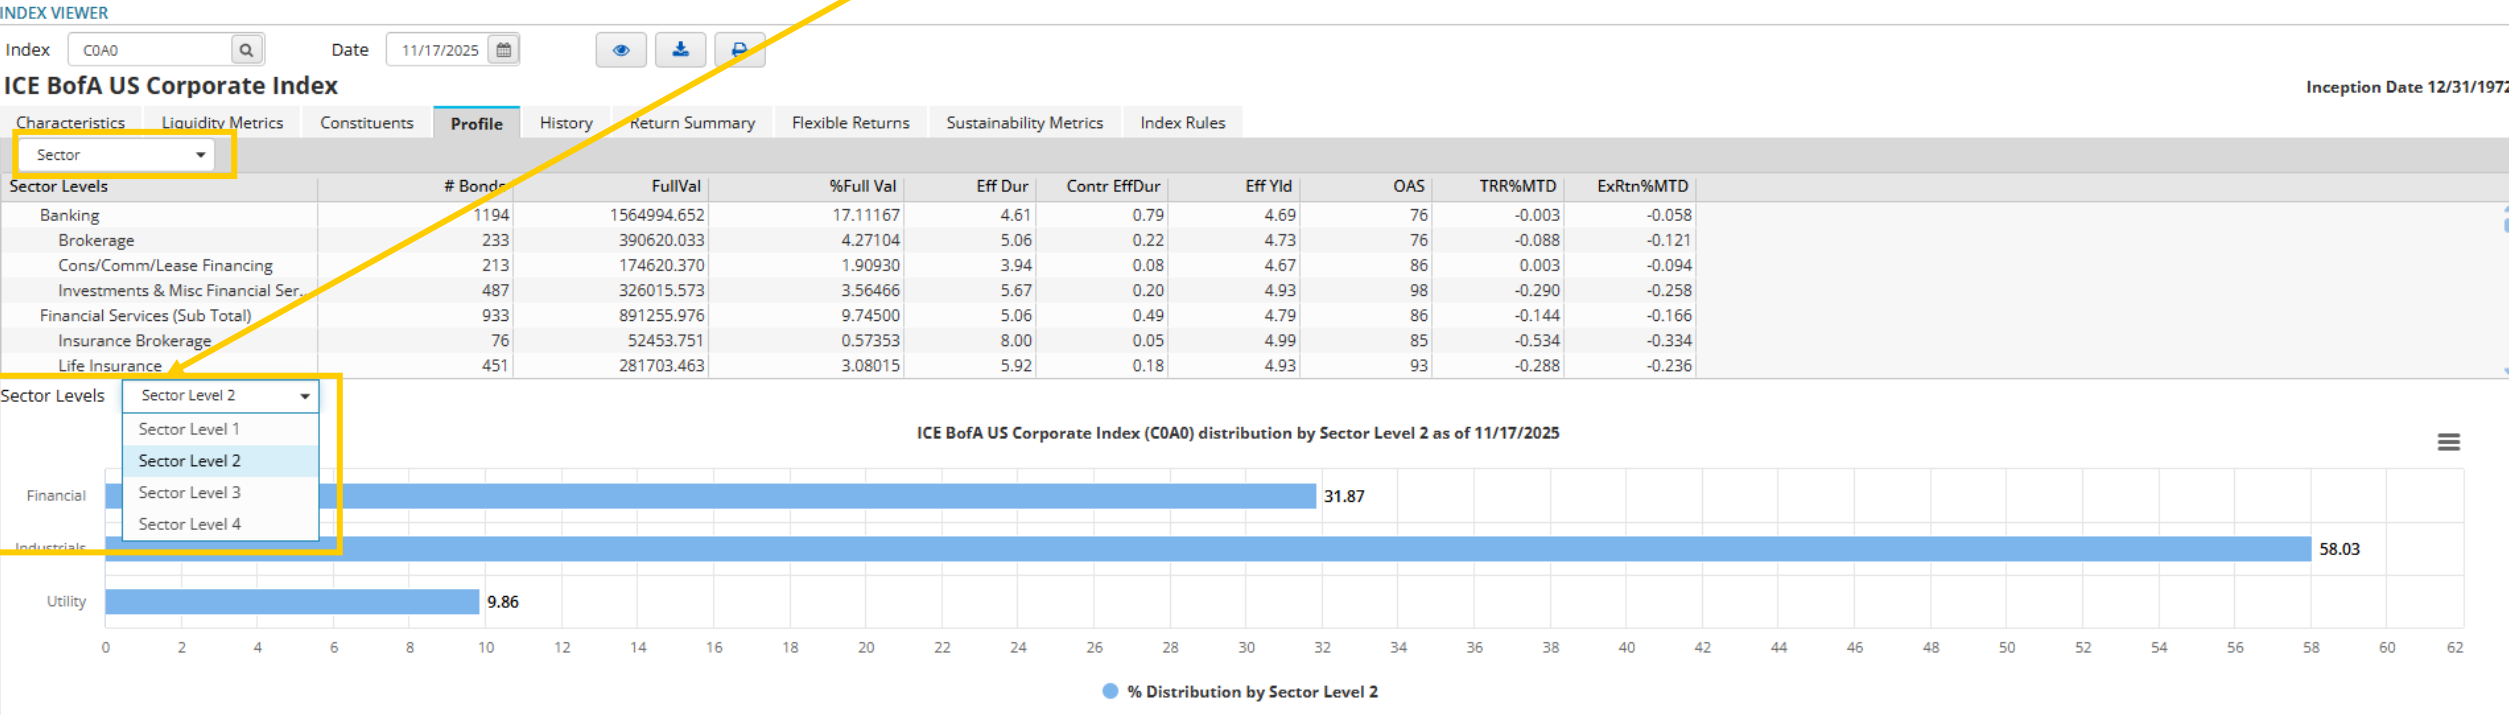

Use the drop down to select the segmenting criteria for the profile analysis.

Use this icon to print, download, and copy the chart.

# Index Viewer – Profile (sector)

When you select sector as the segmenting criteria, you then have the additional option of charting level 1, 2, 3, or 4. In this example, 31.87% of bonds in the US Corporate Index have Financial as their level 2 sector, 58.03% are Industrials, and 9.86% are Utility bonds.

# Index Viewer – History

The History tab shows trailing monthly, quarterly, and annual performance and spread statistics back to the inception of the selected index.

You can use the drop down to select the values you would like displayed historically.

# Index Viewer – Return Summary

The Return Summary tab shows performance data for the following periods:

- 1-month
- 3-month
- 6-month
- YTD
- 1-year
- Annualized 3-year
- Annualized 5-year
- Annualized 10-year
- Annualized since inception

By default, returns are shown in local currency terms.

# Index Viewer – Return Summary (changing base currency)

Use the currency drop down to select an alternate base currency. Choose 100 (% Hedged) for fully hedged returns.

When an alternate base currency is selected, the following additional rows are added to the display:

**Currency Return:** the return generated by the change in spot currency rates.

**Hedge Return:** the gain or loss resulting from the forward currency position.

**Total Return (converted):** the index return inclusive of spot and forward currency performance.

# Index Viewer – Flexible Returns (changing base currency)

Use the Currency drop down to select an alternate currency. Choose 100 (% Hedged) for fully hedged returns.

When an alternate base currency is selected, the following additional rows are added to the display:

**Currency Return:** the return generated by the change in spot currency rates.

**Hedge Return:** the gain or loss resulting from the forward currency position.

**Total Return (converted):** the index return inclusive of spot and forward currency performance.

ICE Data Indices - Rules & Methodology

ICE BofA US Corporate Index (C0A0)

ICE BofA US Corporate Index tracks the performance of US dollar denominated investment grade corporate debt publicly issued and settled in the US domestic market. Qualifying securities must have an investment grade rating (based on an average of Moody's, S&P and Fitch), at least 18 months to final maturity at the time of issuance, at least one year remaining term to final maturity as of the rebalancing date, a fixed coupon schedule and a minimum amount outstanding of \$250 million. Original issue zero coupon bonds, 144a securities (with and without registration rights), and pay-in-kind securities (including toggle notes) are included in the index. Callable perpetual securities are included provided they are at least one year from the first call date. Fixed-to-floating rate securities are included provided they are callable within the fixed rate period and are at least one year from the last call prior to the date the bond transitions from a fixed to a floating rate security. Contingent capital securities ("cocos") are excluded, but capital securities where conversion can be mandated by a regulatory authority, but which have no specified trigger, are included. Other hybrid capital securities, such as those issues that potentially convert into preference shares, those with both cumulative and non-cumulative coupon deferral provisions, and those with alternative coupon satisfaction mechanisms, are also included in the index. Equity-linked securities, securities in legal default, hybrid securitized corporates, eurodollar bonds (USD securities not issued in

# FX/Forward Rates

# FX/Forward Rates

The FX/Forward Rates tab contains the spot and forward currency rates used for currency and hedged return calculations.

View or download the data.

Enter an ISO currency code using the free type boxes, or use the drop down to select a base currency and then enter an as of date to see the rates for that date.

Click on any column header to sort the list and click on the same header a second time to sort the list in the opposite order. You can also click on the filter icon and filter the list using the following selection of criterion:

- Equals
- Contains
- Less than or equal to
- Greater than or equal to
- In range

WM/Reuters Closing Mid Spot Rates and Forward Rates

The WM/Reuters Closing Spot Rates and the WM/Reuters Forward Rates provided by The WM Company plc in conjunction with Reuters. The WM Company plc shall not be liable for any errors in or delays in providing or making available the data contained within this service or for any actions taken in reliance on the same except to the extent that the same is directly caused by its or its employees' negligence.

# Charts

# Charts – Overview

Go to the Charts tab to create and save charts that cover an extensive historical database of performance, risk, liquidity, and many other characteristics for individual constituents, indices, points on government, swap, and corporate yield curves, and FX rates.

Select a product tab to add data elements to your chart.

You can combine fields from any of the product tabs in a single chart.

In the Math Exp tab, you can also create your own time series based on mathematical operations applied to the selected product data.

By default, statistics will appear below the generated chart. You can uncheck this box to deselect the option.

Remember to save your chart.

# Create new chart – Yield curve data chart

Click on the Yield Curve tab to load par coupon or spot rates for a point along any one of our government, swap or corporate fair value yield curves. For corporate yield curves, which are segmented by rating and/or sector, you can also select the spread over the corresponding government curve.

1. Select a market (Gov't, Swap or Corp)

- For corporates: select a currency and a sector (all Corporates, Financials, Industrials, Utilities), then specify a rating category
- For governments and swaps select a country.

2. Select a Maturity point and a curve type (either part coupon or spot), spread curves are also available for corporates.

3. After you have made all selections, add to the yield curve series to the chart list.

The screenshot shows the configuration interface for a Yield Curve data chart. At the top, there are date pickers for 07/11/2022 and 07/11/2024, an 'Or' option, a 'Last 2 Years' dropdown, a checked checkbox, and a 'Frequency' dropdown set to 'Daily'. On the left is a vertical sidebar with categories: Fixed Income, Equity, Commodity, Volatility, US Mortgage, Loan Ind., Blended, Yield Curve (highlighted), FX, and Math Exp. The main area is divided into sections. The 'Category' section (marked with a blue circle 1) contains dropdowns for 'Corporate', 'USD', and 'Corporate'. The 'Market' section has a listbox with options: AAA-A3 (highlighted), AAA-A3-MKTWGT, AAA-A3-3T-MOVAVG, AAA, AA1-AA3, and AA1-AA3-MKTWGT. The 'Maturity' section has a dropdown set to '1 Yr'. The 'Curve' section has a dropdown set to 'ParCpn-Semi'. Two yellow arrows point from a blue circle 2 to the 'Maturity' and 'Curve' dropdowns. At the bottom, a blue circle 3 points to the 'Add Item' button, with a 'Replace Item' button next to it.

# Create new chart – Currency data

Click on the FX tab to load the closing spot and forward cross rates used to calculate the global bond indices. Index calculations are based on The WM/Reuters Closing Spot Rates and The WM/Reuters Forward Rates provided by The WM Company plc in conjunction with Reuters.

Select a currency pair...

...and a tenor...

...then add the selection to your list.

# Yield Curve Charts

# Yield Curve Charts – Select chart type

In the Yield Curve Charts function, you can chart and download a wide selection of government, swap, and corporate fair value yield and spread curves.

Click Create new under either “Full Yield Curves” or “Individual Maturity Points” in the Analysis Dashboard to display a new blank template.

# Yield Curve Charts – Select curve(s)

Start by selecting a curve type...

...then highlight one or more curves on the list...

...choose a date and a curve type...

...lastly, click on the right arrow to add the corresponding market curve you have selected to the list. Use the left arrow to remove a selected item from the list.

Highlight a selected item and use the up/down arrows to change the list order.

# Yield Curve Charts – Select curve(s) (corporate)

When the Corporate curve type is selected, you will have a choice of currency, sector, and rating.

Select desired currency from the drop-down options...

... then select a sector from the drop-down options...

... finally, select a rating category within the selected currency and sector.

The diagram illustrates the selection process for a corporate yield curve chart. It consists of three screenshots of a software interface, each with an arrow pointing to it from a descriptive text label.

The first screenshot shows the 'Market' section with a 'Corporate' dropdown menu. The 'USD' option is selected, and the dropdown is open, showing a list of currencies: USD, GBP, EUR, JPY, CAD, and AUD. An arrow points from the text 'Select desired currency from the drop-down options...' to this dropdown.

The second screenshot shows the same 'Market' section, but the 'Corporate' dropdown is now open, showing a list of sectors: Corporate, Financial, Industrials, and Utility. An arrow points from the text '... then select a sector from the drop-down options...' to this dropdown.

The third screenshot shows a list of rating categories: AAA-A3, AAA-A3-MKTWGT, AAA-A3-3T-MOVAVG, AAA, AA1-AA3, and AA1-AA3-MKTWGT. An arrow points from the text '... finally, select a rating category within the selected currency and sector.' to this list.

# Yield Curve Charts – As of date and curve type

Date and curve choices vary between Full Yield Curve charts and Individual Maturity Points charts.

## Full Yield Curve charts

For Full Yield Curve charts, you can add specific dates...

12/02/2025

Prev Day

Prev Day

Curr Day

Prev ME

Prev QE

Prev YE

... or you can add dates in relative terms (e.g., the previous day, previous month-end day, previous quarter-end day, etc.)

Finally, pick a curve type (e.g., par coupon or spot).

Note: Spread curves are only available for the Corporate market.

... finally, pick a curve type (e.g., par coupon or spot).

Note: Spread curves are only available for the Corporate market.

# Yield Curve Charts – Output results

Once you have set up your monitor, your chart will populate on the bottom half of the screen with separate tabs for spread and underlying raw data.

# Yield Curve Charts – Data Tab Output results

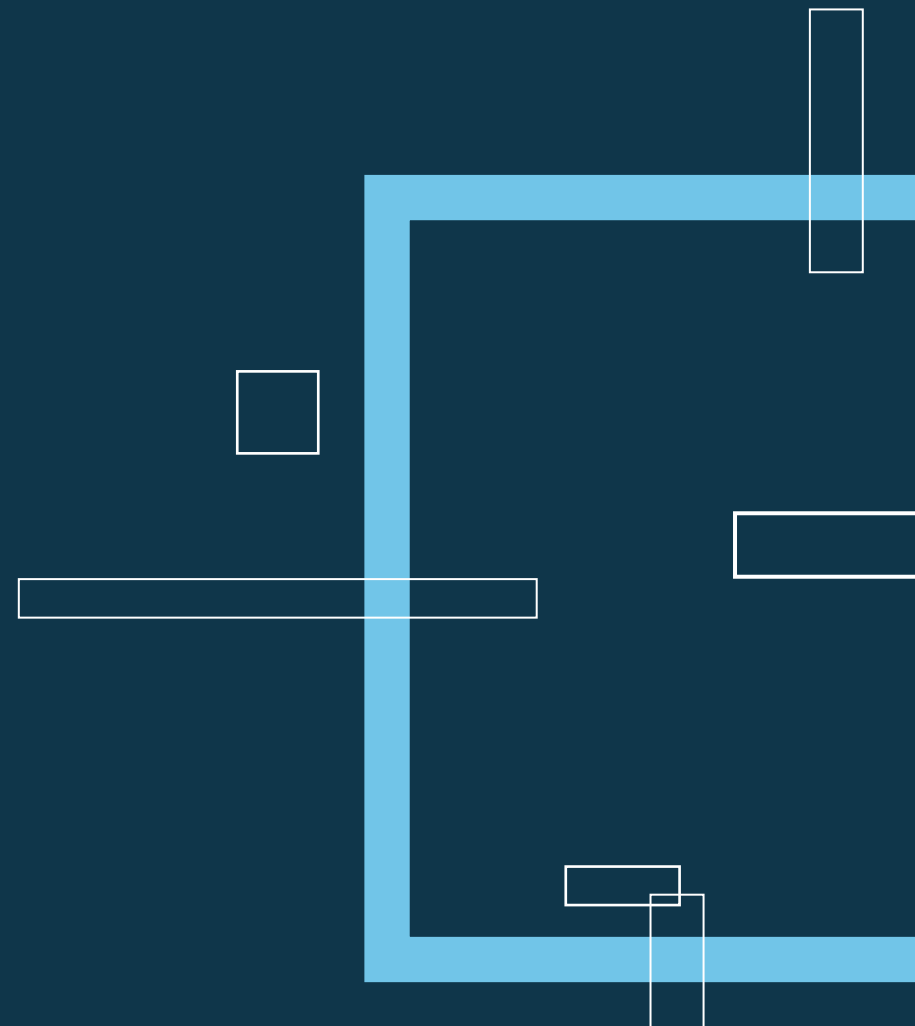

The data tab displays all underlying data points for each curve in the chart, and can be downloaded or printed

# Correlation Matrix

# Correlation Matrix – Overview

Using the Correlation Matrix function, you can run correlations across multiple indices

Save your matrix here.

Select your date range and then choose the frequency.

Choose from the following attributes: Total Return %, Price Return %, Govt OAS, Excess Return %

Enter the index ticker and currency combination. You can enter indices one at a time or use the **Load List** button to add multiple indices at once.

Use the Currency drop down to select the index local currency, or choose another base currency and select hedged or unhedged.

# Profile

# Profile – Select indices and data elements

The profile Analysis function lets you create a report that segments an index into custom buckets. You can break the index down across up to three attributes and calculate returns and statistics for each cell in the segmented matrix. Once a profile is created, the report template is saved on your account and can be scheduled for automatic updates and automatic delivery to your email or FTP.

1. Start by entering an index ticker and clicking the Add button
2. Select a data category...
3. Highlight one or more fields from the selected data category and then use the right arrow to add the field(s) to the selected list. You can use the left arrow to remove a selected item from the list.

# Profile Analysis – Create custom segments

You can segment the index into one, two, or three attributes.

Use the drop downs to select the attributes used to create the matrix. In this example the index will first be segmented by the Level 3 Sector classification, then by rating category and then by maturity bucket.

Create Segments

Select a bucket above to rename

Rename

Highlight a category and use the **Up/Down** buttons to change the order in which it appears in the results.

Numeric fields such as maturity, duration, yield and spread will be populated with default bucket ranges that can be edited. Use commas to separate the break points.

In this example the index will be segmented into five maturity buckets: < 3 years, 3-5 years, 5-7 years, 7-10 years and 10+ years.

# Profile Analysis – Create custom segments (continued)

When Ticker is selected as the attribute to be segmented, you have additional customization options.

In this example, TICKER1 and TICKER2 as one group, TICKER3 and TICKER4 will be a second group and all other issuers will be combined in a third group.

Create a group by entering one or more tickers and clicking the **Add** button.

☒ Bucket all other item into one

☐ Show all other item separately

All other tickers not included in a custom group can be shown individually or grouped together as a single line item.

# Profile Analysis – Run/Save the report

After you have entered all parameters for your Profile Analysis, use the action buttons at the top of the screen to run and/or save your report.

**Note:** the Run and **Save As** buttons are not active when you first create a new Profile, they become active after you have saved the profile.

Open/Hide the input section of the screen.

Save your file and immediately run the report. This option becomes available after the first time it is saved.

Save your analysis but do not run the report.

Make a copy of an existing file and save it under another name.

- Index: show results grouped by index
  - Characteristics: show results grouped by the value being calculated (e.g., yield, duration, spread, etc.)
  - Two-dimensional: displays the results for a selected index/value in a two-dimensional matrix with the first attribute as the y-axis and the second attribute as the x-axis of the report.

# Profile Analysis – Run/Save the report (continued)

After you click the **Save** Button for a new Profile you will be asked to enter a file name and as of date. If you enter a month-end date you will also have to indicate whether you want to use the New (post-rebalancing) or Old (pre-rebalancing) constituent universe. After you have made your selections, click Yes to run the analysis or No to save the parameters without running the analysis.

Do you also want to Run the analysis?

# Profile History

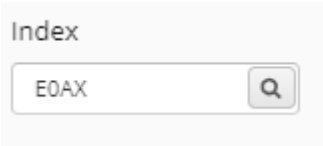

Running a Profile History analysis is the same as running a Profile analysis with just a few differences:

You will have to select a frequency.

The screenshot shows a control bar with buttons: 'Bring up to date', 'Save & Run', 'Delete', 'Save As & Run', and 'Download'. Below these is a 'Frequency' dropdown menu with options 'Monthly', 'Quarterly', and 'Yearly'. To the right is a 'Month End Universe' dropdown set to 'New' with a note '(Returns always use old universe)'. A yellow arrow points from the text 'You will have to select a frequency.' to the 'Frequency' dropdown.

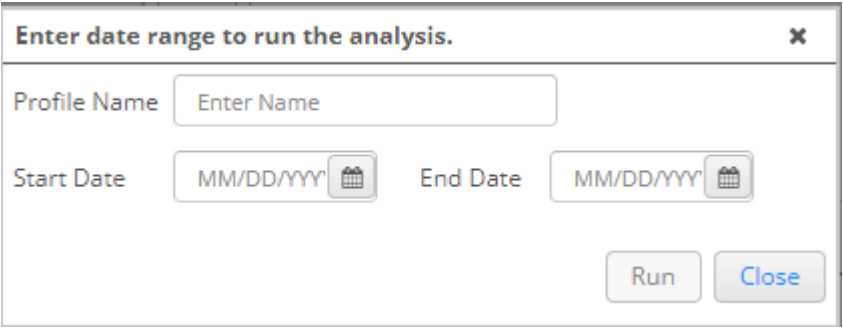

You can only run one index per analysis.

The screenshot shows an 'Index' input field with the text 'EOAX' and a search icon. A yellow arrow points from the text 'You can only run one index per analysis.' to the input field.

When you run the analysis you will be asked to enter a date range instead of a single as of date.

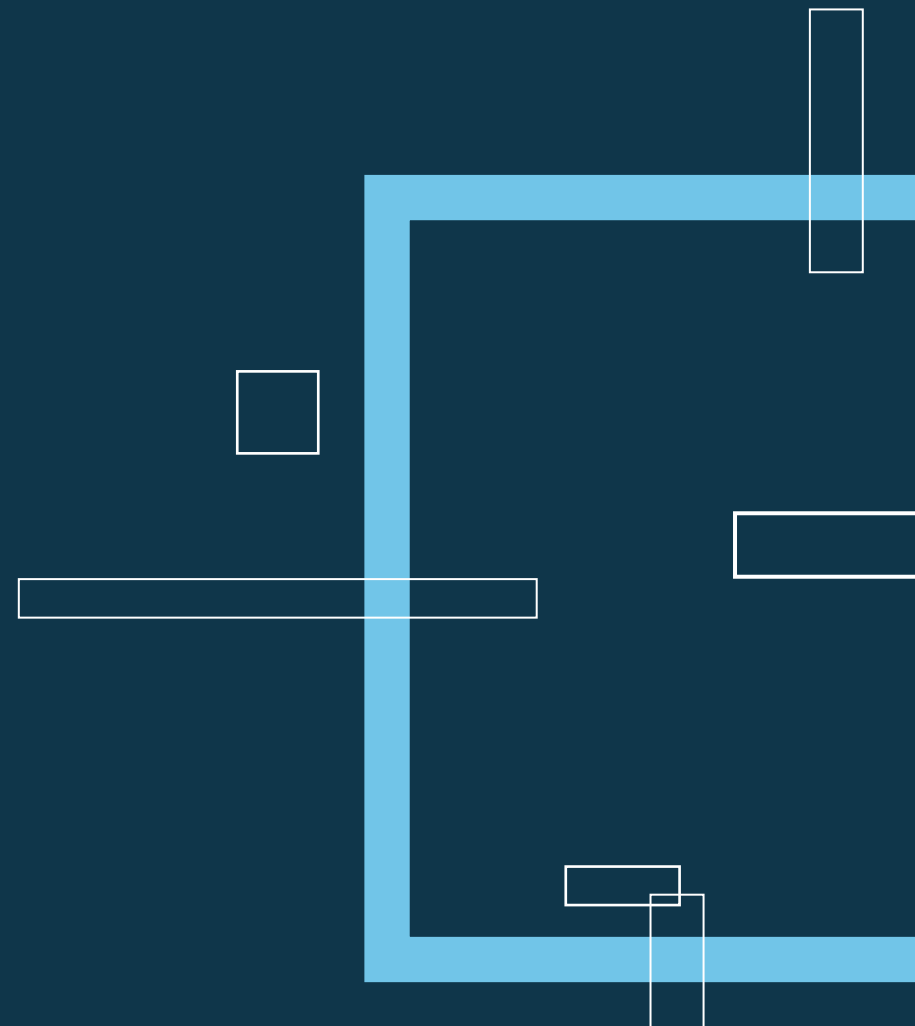

Results can be exported to Excel but will not be shown on screen.

The screenshot shows a dialog box titled 'Enter date range to run the analysis.' with a close button. It contains a 'Profile Name' field with the placeholder 'Enter Name'. Below are 'Start Date' and 'End Date' fields, each with a date picker icon. At the bottom are 'Run' and 'Close' buttons. A yellow arrow points from the text 'When you run the analysis you will be asked to enter a date range instead of a single as of date.' to the dialog box.

# Index Blend/Screen

# Index Blend/Screen – Overview

Use the Index Blend/Screen function to back test your own custom strategies. The following features are available on the Index Blend/Screen function

- **Blend Indices:** combine two or more standard indices with their weights determined automatically based on relative market capitalizations or based on fixed allocations that you enter manually.
- **Add Filters:** apply filters to a single standard index, or to a combination of blended standard indices, to include or exclude specific sectors, rating or maturity bands, etc.
- **Back Test Result:** compile historical results for your custom index on a monthly, quarterly or annual basis. History extends as far back as the later of either (i) 1997 or (ii) the launch date of the standard indices that are used as the basis for the custom index.

# Index Blend/Screen – Template overview

Save the analysis and choose the time series to view the back test.

Choose if output data will use the new (post-rebalanced) or old (pre-rebalanced) universe constituents to calculate data elements.

Select a frequency

Create and/or apply a saved filter by clicking on the blue “Filter” hyperlink

Select Indices and weights if applying a fixed weight blend

Select data elements to view in a downloadable monthly report

The screenshot shows the 'Index Blend/Screen' template interface. At the top, there are buttons: 'Data Selection', 'Save & Run', 'Delete', 'Save As & Run', 'Download', and 'Bring up to date'. Below these, there are two dropdown menus: 'Frequency' (set to 'Monthly') and 'On month end dates, use' (set to 'New'). A note below these says '(Returns always use old universe)'. To the right of the 'On month end dates, use' dropdown is a text label 'universe for index characteristics'. Below this is a 'Filter' dropdown set to 'None'. To the right of the 'Filter' dropdown is a search bar for 'Index' and a 'Load List' button. Below the search bar is a 'Percentage' input field. To the right of the 'Percentage' input field are two arrows, one pointing right and one pointing left. Below these is a table with the header 'Index | Percentage'. Below the table is a section titled 'Categorized Data Elements' with a dropdown menu set to 'Characteristics'. Below the dropdown is a search bar for 'Search Data Elements'. Below the search bar is a list of data elements: 'No. of Issues', 'Par Wtd Coupon', 'Factor', 'Current Period Coupon', '% Face Value', '% Full Market Value', and '% MktVal-PrevMend'. To the right of the list are two arrows, one pointing right and one pointing left. Below the list is a section titled 'Selected Items' with a large empty box and two arrows, one pointing up and one pointing down.

# Index Blend/Screen – Blend Indices

The screenshot shows a web interface for creating an index blend. On the left, there is a search box with 'Index' and 'H0A1' entered, a 'Percentage' field, and a 'Load List' button. A yellow arrow points from the 'Load List' button to the text below. In the center, there are two arrows, one pointing right and one pointing left, with a yellow arrow pointing from them to the text below. On the right, there is a table with the header 'Index | Percentage' and one row containing 'C0A4 | 50'. A yellow arrow points from the table to the text below.

| Index | Percentage |
|-------|------------|
| C0A4  | 50         |

Start by selecting one or more standard indices to be used as the starting point for your custom index. If you select multiple indices, you have three weighting options for the Percentage field:

- Leave the field blank for all components, in which case the index will be capitalization-weighted.
- Assign a weight to each of the components with the sum totaling 100. The blended index will rebalance to these fixed weights monthly.
- Assign weights to some, but not all, of the components. The components that have not been assigned a weight will be capitalization-weighted relative to each other and that combined unit will receive the unassigned weight.

Use the right and left arrows to add and remove indices with their specific weighting to your custom blend.

# Index Blend/Screen – Create and apply filters

Click on the Filter link to apply additional constraints on the selected standard indices. Saved filters can be applied quickly to any new prototype template.

Click on the Filter link to open the **Filter Information** Screen

# Custom Index Tool

# Download

# Download – Overview

The Download menu contains a collection of tools that you can use across multiple asset classes to analyze indices on an ad hoc basis. You can download historical time series data for individual bonds, indices, yield curves and more. With these tools, you can quickly tap into our entire historical index warehouse and extract the data you need.

## Index Data History:

### ➤ Fixed Income Download

Export multiple data fields for selected indices or individual ISINs. For indices, the content includes the full history for the index back to its inception date, which for some indices goes back to December 31, 1972. For individual bonds, data extends as far back as 1997 but will only include a given security during the period that it was a constituent of one of the indices.

### ➤ Equity Download

Download Equity index level characteristics and historical returns, over a selected time range.

### ➤ Commodity Download

Download Commodity index level characteristics and historical returns, over a selected time range.

### ➤ Multi-Asset Blend Download

Download Multi-Asset Blend index level characteristics and historical returns, over a selected time range.

### ➤ Volatility Download

Download individual security or Volatility index level characteristics, historical returns, over a selected time range.

### ➤ U.S. Mortgage Loan Indicators Download

Download individual security or US Rate Lock index level characteristics, historical returns, over a selected time range.

### ➤ AMERIBOR

Download AMERIBOR index level characteristics and historical returns, over a selected time range.

## Turnover Report Download:

Look up descriptive information, pricing and risk statistics for a security on a selected date along with a list of all indices in which that security is a constituent.

## Rating Migration Report:

View monthly index level changes in the composite ratings for an index over a selected time-period. Download a defaulted bond list over a period of time for a Fixed Income index.

## Yield Curve Download:

The Yield Curve Download function allows you to download term structures for one or more yield curves over a specified date range. Available yield curves include governments, swaps and corporate fair value curves by currency/rating category. Data availability depends on the market and curve type, but in some cases extends as far back as 1985.

# Download – Index Data History

Select the Index Data History function from the Download menu to tap into our entire historical database of top-level index data and download returns and statistics for individual constituent securities.

Select a date range and frequency:

# Download – Rating Migration Report

The Rating Migration download is a dataset of changes in the composite ratings of global index constituents. The Databook tracks upgrades and downgrades, rising stars, fallen angels and defaults, all of which are tallied in terms of number of bonds, number of issuers and face value.

## Rating Migration Download Features:

- Trailing history is provided back to the beginning of 2014. All historical face values are shown in USD terms, converted at exchange rates in effect on the as of date of the report.
- Trailing 1, 3 and 12-month statistics are compiled using two aggregation methods. The “fixed universe” is based on a frozen set of bonds that were constituents in the selected index at the beginning of the measurement period. The “dynamic universe” includes all bonds that were index constituents at any time during the measurement period.

# Report Scheduler

# Report Scheduler – Overview

With the Report Scheduler function, you can set up and manage automated data feeds from a wide selection of data. Data files can be directed to an FTP and/or email address and can be delivered on a daily, weekly, or monthly frequency.

## File Types:

### Fixed Income

- Index Level Data
- Constituent Level Data
- Rebalancing Changes Data
- Profile Data
- Yield Curve Data
- Corporate Action

### Equity

- Index Level Data
- Constituent Level Data
- Corporate Action
- Rebalancing Changes Data

### Commodity

- Index Level Data
- Constituent Level Data

### Volatility

- Index Level Data
- Constituent Level Data

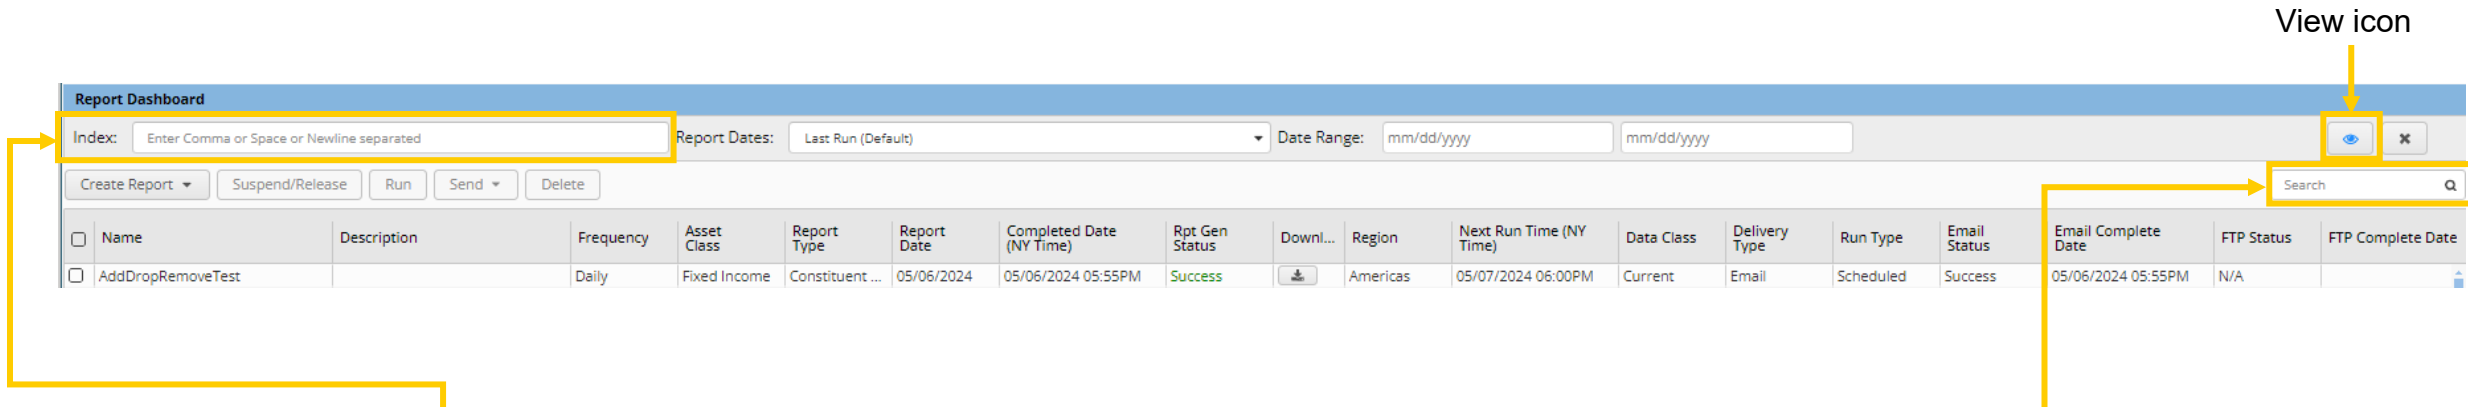

### US Mortgage Loan Indicators

- Index Level Data

## File Type Descriptions:

- **Index-Level Data** – send automated top-level index returns and statistics to your email and/or your back office.
- **Bond-Level Data** – send automated feeds of index constituent returns and statistics to your email and/or your back office.
- **Rebalancing Changes Data** – send automated constituent level files containing security additions, removals and changes for the index.
- **Yield Curve Data** – send automated feeds of government, swap and corporate fair value yield curves that are derived from the valuations of our index constituencies.
- **Corporate Action** – send automated feeds of upcoming corporate action data.

# Report Scheduler – Report Dashboard Overview

Use the Index Search box to find all of the reports in which one or more indices are included by entering the index ticker or entering multiple indices, separated by commas. Press the view icon for results to be displayed.

# Report Scheduler – Report Editor Split-Screen View

Open the Report Editor in the split-screen view by selecting the Create Report option to create a new report or by clicking on an existing report on the Report Dashboard.

Click on an option under the Create Report Menu Bar to open the Report Editor

or...

Click on any row to open the Report Editor for a previously created report

Use the free-text search box to search for any data within the Dashboard across the columns. The results will automatically update as you enter the text/data into the search box.

# Limitations and notices

This guide is not to be published, reproduced, copied, disclosed or used without the express written consent of Intercontinental Exchange, Inc.

This guide is provided for informational purposes only. The information contained herein is subject to change without notice and does not constitute any form of warranty, representation, or undertaking. Nothing herein should in any way be deemed to alter the legal rights and obligations contained in agreements between Intercontinental Exchange, Inc., ICE Data Indices, LLC and/or any of their affiliates and their respective clients relating to any of the products or services described herein. Nothing herein is intended to constitute legal, tax, accounting, investment or other professional advice. Clients should consult with an attorney, tax, or accounting professional regarding any specific legal, tax or accounting situation.

The content in this guide is provided on an “AS IS” basis. Intercontinental Exchange, Inc. and its affiliates, including ICE Data Indices, LLC, make no warranties whatsoever, either express or implied, as to merchantability, fitness for a particular purpose, or any other matter. Without limiting the foregoing, Intercontinental Exchange, Inc. and its affiliates, including ICE Data Indices, LLC or any of its affiliates make no representation or warranty that any data or information (including but not limited to evaluated pricing) supplied to or by it are complete or free from errors, omissions, or defects. In no event shall Intercontinental Exchange, Inc., ICE Data Indices, LLC and/or any of their affiliates be liable to any party for any direct, indirect, incidental, exemplary, compensatory, punitive, special or consequential damages, costs, expenses, legal fees, or losses (including, without limitation, lost income or lost profits and opportunity costs) in connection with any use of the content in this guide even if advised of the possibility of such damages.

ICE Data Services refers to a group of products and services offered by certain Intercontinental Exchange, Inc. (NYSE:ICE) companies and is the marketing name used for ICE Data Services, Inc. and its subsidiaries globally, including ICE Data Pricing & Reference Data, LLC, ICE Data Services Europe Limited and ICE Data Services Australia Pty Ltd. ICE Data Services is also the marketing name used for ICE Data Indices, LLC and ICE Data Derivatives Inc. and its subsidiaries globally and certain other data products and services offered by other affiliates of Intercontinental Exchange, Inc. (NYSE:ICE).

Historical returns and weights before the launch date of an index are based upon backtested data. For the period prior to the launch date of an index, simulated performance data has been provided as an illustration of how the index would have performed during the relevant period had the index been calculated by ICE Data Indices, LLC using the current index methodology. Such simulated performance data has inherent limitations, as the simulated data is produced by the retroactive application of the methodology. Simulated performance data is based on criteria applied retroactively with the benefit of hindsight and knowledge of factors that may have positively affected its performance and may reflect a bias toward strategies that have performed well in the past.
