

Market Monitor

No.20 – July 2014

www.amis-outlook.org

*The **Market Monitor** is a product of the [Agricultural Market Information System \(AMIS\)](#). It covers the international markets for wheat, maize, rice and soybeans, giving a synopsis of major market developments and the policy and other market drivers behind them. The analysis is a collective assessment of the market situation and outlook by the ten international organizations that form the AMIS Secretariat. Ultimately, the report aims at improving market transparency and detecting emerging problems that might warrant the attention of policy makers.*

World Supply-Demand Outlook

Good crop prospects and larger than earlier anticipated stocks are expected to boost grain supplies in 2014/15. However, with the critical growing period for maize, soybean and rice still ahead in the northern hemisphere, and with El Niño looming, market uncertainty is likely to prevail during the coming months.

	From previous month f'cast	From previous season
Wheat	■	▲
Maize	▲	▲
Rice	▲	▲
Soybeans	■	▲

▲ Easing

■ Neutral

▼ Tightening

For wheat, maize and rice, previous season refers to 2013/14. For soybeans, previous season refers to 2012/13.

WHEAT	million tonnes						
	USDA		IGC		FAO-AMIS		
	2013/14	2014/15	2013/14	2014/15	2013/14	2014/15	
	est.	f'cast	est.	f'cast	est.	f'cast	
		11-Jun		26-Jun		5-Jun	3-Jul
Production	714	702	710	699	717	703	707
Supply	889	888	882	891	874	880	881
Utilization	703	699	690	697	687	699	699
Trade	163	152	152	144	155	149	149
Ending Stocks	186	189	192	194	174	182	180

- **Wheat** production forecast for 2014 increased, mostly on improved prospects in Brazil, the EU, India and Russia, more than offsetting downward adjustments in Pakistan, Ukraine and the US.
- Utilization in 2014/15 to grow by 1.7 percent from 2013/14, mostly on higher food use, but also feed use, in China and the EU.
- Trade in 2014/15 expected to fall from the 2013/14 record, primarily on expectations of smaller wheat purchases by China and Brazil.
- Stocks forecast (ending in 2015) revised slightly downwards as cuts in the forecast of inventories in Canada, China, Iraq and Russia more than outweighed increases in Morocco and the US.

MAIZE	million tonnes						
	USDA		IGC		FAO-AMIS		
	2013/14	2014/15	2013/14	2014/15	2013/14	2014/15	
	est.	f'cast	est.	f'cast	est.	f'cast	
		11-Jun		26-Jun		5-Jun	3-Jul

Trade	124	116	118	115	119	112	112
Ending Stocks	169	183	167	180	173	169	200

- **Maize** production forecast for 2014 raised significantly, mostly on improved outlook for crops in the EU and the US.
- Utilization in 2014/15 lower than was expected earlier, primarily on reduced industrial use in China.
- Trade in 2014/15 to contract compared to 2013/14, following a likely drop of imports by the EU.
- Stocks forecast (ending in 2015) raised compared to the previous month, driven by expectation of much higher carryovers in China and the US.

RICE	million tonnes						
	USDA		IGC		FAO-AMIS		
	2013/14	2014/15	2012/13	2013/14	2013/14	2014/15

Trade	41	41	38	40	39	39	39
Ending Stocks	112	111	110	109	182	182	183

- **Rice** production forecast for 2014 upgraded, on higher expected outputs in Myanmar, Pakistan and Tanzania.
- Utilization set to expand by 2.4 percent in 2014/15, with food consumption rising by 1.5 percent.
- Trade in 2014 seen to increase by 5 percent to a record. In 2015 (shown under 2014/15), trade could surpass that level slightly, with Thailand recouping its number one position among exporters.
- Stocks (ending in 2015) adjusted upwards, now pointing to a small increase from 2014.

SOYBEANS	million tonnes						
	USDA		IGC		FAO-AMIS		
	2012/13	2013/14	2012/13	2013/14	2012/13	2013/14	
	est.	f'cast	est.	f'cast	est.	f'cast	
		11-Jun		26-Jun		5-Jun	3-Jul
Production	268	284	272	283	267	283	283

Utilization	259	270	267	282	265	280	280
Trade	101	111	99	108	99	114	114
Ending Stocks	57	67	27	28	28	31	31

- **Soybeans** 2013/14 production forecast reduced marginally on a lower than anticipated harvest in Brazil. Global output still projected to rise by 6 percent from 2012/13, to an all-time high.
- Utilization in 2013/14 set to expand by 5.5 percent y/y, mainly driven by China, Argentina and Brazil.
- Trade is set to expand by 14 percent, underpinned by rising import demand from China.
- Stocks forecast (2013/14 carry-out) still pointing to a 13 percent recovery. Downward corrections for Brazil and the US were compensated by upward revisions in Argentina and India.

All totals (world estimates and forecasts) shown are computed from unrounded data. All changes, in absolute or percentage terms, are also calculated based on accordingly reported in the supply/demand commentaries. Analysis presented in this report is largely based on information as of late June 2014. **Explanatory notes** available at the end of the report.

Crop Monitor*

Crop Conditions in AMIS countries (as of June 28th)

Crop condition map synthesizing information for all four AMIS crops as of June 28th. Crop conditions over the main growing areas for wheat, maize, rice, and soybean are based on a combination of national and regional crop analyst inputs along with earth observation data. **Crops that are in less than favourable conditions are displayed on the map with their crop symbol.**

Highlights

Wheat- Conditions remain mostly favourable. In the northern hemisphere the winter wheat season is drawing to a close. Overall yields in the US are expected to be down due to the drought in the Southern Plains. In Canada there is increased concern over continued frequent rains and cool temperatures particularly in the Prairies region, though conditions of seeded crops remain favourable. In the EU, Russia, Ukraine and China conditions are mostly favourable. In the southern hemisphere planting is progressing and conditions are mostly favourable at this early stage of the season.

Maize- Overall conditions are favourable. In the southern hemisphere, the season is drawing to a close. In Argentina, conditions are favourable though harvest delays continue. In Brazil, the second crop is in maturity to harvest stage and is in good condition. In the northern hemisphere conditions are generally favourable at this early stage of the season.

Rice- Conditions are mixed. In Indonesia and Viet Nam conditions are mostly favourable, and in Thailand there is some concern for the main crop (planted in May-June) due to dry conditions. In China conditions are generally favourable but concern remains over excessive wet conditions affecting the early-planted rice crop. In the EU and US conditions are favourable.

Soybeans- In the southern hemisphere the season is drawing to a close and overall prospects remain good. In Argentina, overall crop conditions are favourable, though harvest delays continue in some areas. In the northern hemisphere the crop is in early growth stages and conditions are generally favourable.

El Niño situation update

The probability of the onset of an El Niño event in the late summer or early autumn of the northern hemisphere continues to increase, according to June outlooks from the Australian Bureau of Meteorology, the International Research Institute for Climate and Society, and the U.S. National Oceanic and Atmospheric Administration. Odds are put in the range of 70 to 80 percentage. Sea surface temperatures in the Pacific have warmed to just reach the threshold defining El Niño, and models show them continuing to rise in the months ahead. However, atmospheric features of El Niño, like weakening trade winds, have not yet appeared. Minimal influence on northern hemisphere summer crops is expected. Impacts are more likely to be felt during the 2014/15 summer months of the southern hemisphere. In that period, below-normal rainfall could be experienced in parts of Asia, Southern Africa, and Australia, potentially affecting rice, maize, and wheat. In major regions of South America El Niño is often associated with above average rainfall potentially benefiting maize, soy and wheat. El Niño conditions generally last six to nine months, but can persist for as long as eighteen months.

*Crop Monitor is developed for AMIS by GEOGLAM. It summarizes latest conditions for AMIS crops based on regional expertise and analysis of satellite data, ground observations, and meteorological data.

Wheat In the *northern hemisphere*, wheat conditions are mostly favourable. In **Russia**, winter and spring wheat conditions are still generally favourable, however there is some concern due to above average temperatures and some dryness in central and southern growing regions, though conditions have improved in late June. In **Ukraine**, conditions remain favourable. Harvest has begun in the south and is in grain-filling to maturity stages elsewhere. There is some concern due to excessive rains in central and western regions, which may affect quality. In **Kazakhstan**, spring wheat is in vegetative stages, and surface moisture is slightly below normal. Water demand will increase as crop approaches reproductive stage. In the **EU**, overall prospects remain positive, above the 5-year average and close to last year. However, there is some concern over persistent dryness and high temperatures in parts of Spain. In **Turkey**, harvest began and conditions improved, however wheat is still negatively impacted by earlier dry conditions. In the **US**, winter wheat harvest is underway. Overall yields are expected to be down despite recent rains primarily due to the long-term drought in the southern Great Plains. Spring wheat conditions are favourable. In **Canada**, overall conditions of seeded crops remain generally favourable, however concerns increased in the Prairie region due to stormy, wet, and unseasonably cool weather. One to two week delays in field operations continue, and there is excess moisture and some flooding. As well as concern over fields being left fallow. In **China**, winter wheat harvest is almost complete and spring wheat conditions remain favourable. In the *southern hemisphere* wheat is in early growth stages and conditions are favourable. In **Brazil**, wheat is in the early vegetative stages and conditions are good. Planted area has increased significantly relative to last season. In **South Africa** conditions are favourable due to sufficient moisture conditions over the main production region (winter rainfall region in the southwest). In **Australia**, conditions during May were generally favourable for establishment and early development. Precipitation during June has been largely average or better across the wheat belt, with Western Australia and parts of Queensland being notable exceptions recording below average falls. In **Argentina**, planting is still delayed due to excess moisture conditions, however drier weather, has improved conditions.

Wheat Conditions for AMIS countries as of June 28th.

For detailed description of the pie chart please see box on page 4.

Maize Conditions for AMIS countries as of June 28th.

For detailed description of the pie chart please see box on page 4.

In **China**, overall conditions remain favourable and the crop is between seedling to flowering stages. There is some concern over pockets of dryness in central growing regions. In **Mexico** conditions are good across the country. Harvest of the winter crop is progressing and production is expected to be higher than last year. Sowing of the spring-summer crop is at its peak, and favourable conditions prevail, though there are some slight delays due to heavy rains in the southwestern regions. In **Nigeria**, conditions are mostly favourable owing to good moisture in central and southern regions where maize is in maturity stages. There is some concern over the northern drier region where warm temperatures and long dry spells, mainly in May and early June, affected maize that is in early vegetative stages.

Maize In the *southern hemisphere*, harvest is nearly complete and conditions are favourable. In **Argentina** overall conditions remain favourable and harvest is almost complete with significant delay relative to last year due to excess moisture. In **Brazil** the second maize crop, which is in maturity to harvest stages, is in good condition. In the *northern hemisphere*, conditions are generally favourable at this early stage of the season. In the **US**, conditions remain good despite heavy rains in the northern plains. In the **EU**, the crop is still in early development stages with a promising start to the season. In **Russia**, moisture conditions are favourable for the emergence and establishment stages. In **Ukraine**, moisture conditions are good for crop development while temperatures have been slightly

Rice Conditions remain mixed. In **Indonesia**, conditions are still mostly favourable. In **Viet Nam** prospects are generally favourable for the winter-spring planted crop, and harvest is nearly complete. Planting of the summer-fall crop is in progress in southern growing regions. In **Thailand**, conditions are mixed. Conditions for the second crop, planted before February remain favourable and harvest is nearly complete, except in the southern regions where it is in vegetative to flowering stages. Conditions for the May and June planted crop (main crop) are mostly favourable, however there is some concern over dry conditions in the northeast and western regions. In **China** conditions are generally favourable, however there is some concern due to excess moisture in southern regions. Single rice is in transplanting to tillering stages, early season rice is in heading to maturity stages and late planted rice is in seeding stages. In the **EU** conditions are close to average with slightly late development in northern Italy. In the **US**, rice conditions are favourable. In **Nigeria**, rainfed, upland rice is in planting to early vegetative stages. Conditions are generally favourable, except in the northern regions where there is concern over dry conditions.

Rice Conditions for AMIS countries as of June 28th.

For detailed description of the pie chart please see box below.

Soy Conditions for AMIS countries as of June 28th

For detailed description of the pie chart please see box below.

Soybeans In the *southern hemisphere*, prospects are still favourable as the season draws to a close. In **Argentina** overall conditions for both the first and second planted crops are still good. The harvest is still delayed compared to the previous season, but there was good progress in the northeast and northwest areas of the country with the welcome drier conditions. In the *northern hemisphere*, conditions are favourable. In the **US** conditions are good at this early stage of the season. In **China** conditions are favourable. Planting is complete and the crop is in early vegetative stages. In **Nigeria** planting has started and conditions are favourable except for in the northern region.

Pie chart description: Each slice represents a country's share of total AMIS production (5-year average). Main producing countries (representing 90 percent of production) are shown individually, with the remaining 10 percent grouped into the "Other AMIS Countries" category. The area within each slice is divided between crops in-season (colour) and out-of-season (gray). The in-season portion is coloured according to the various crop conditions within that country. When conditions are labelled as 'poor' or 'watch', icons are added that provide information on the key climatic drivers affecting conditions. The coloured areas reflect conditions by area rather than overall national production.

Sources and Disclaimers: The Crop Monitor assessment is conducted by GEOGLAM with inputs from the following partners (in alphabetical order): Argentina (INTA), Asia Rice Countries (AFSIS, ASEAN+3 & Asia RiCE), Australia (ABARES & CSIRO), Brazil (CONAB & INPE), Canada (AAFC), China (CAS), EU (EC JRC MARS), India (ISRO), Indonesia (LAPAN & MOA), International (CIMMYT, FAO, IFPRI & IRRI), Japan (JAXA), Mexico (SIAP), Russia (IKI), South Africa (ARC & GeoTerraImage & SANSA), Thailand (GISTDA & OAE), Ukraine (NASU-NSAU & UHMC), USA (NASA, UMD, USGS – FEWS NET, USDA (FAS, NASS)), Vietnam (VAST & VIMHE-MARD). The findings and conclusions in this joint multi-agency report are consensual statements from the GEOGLAM experts, and do not necessarily reflect those of the individual agencies represented by these experts. Map data sources: Major crop type areas based on the IFPRI/IIASA SPAM 2005 beta release (2013), USDA/NASS 2013 CDL, 2013 AAFC Annual Crop Inventory Map, GLAM/UMD, GLAD/UMD, Australian Land Use and Management Classification (Version 7), SIAP, ARC, and JRC. Crop calendars based on GEOGLAM partner crop calendars and USDA crop calendars.

More detailed information on the GEOGLAM crop assessments is available www.geoglam-crop-monitor.org.

International Prices

International Grains Council (IGC) Grains and Oilseeds Index (GOI) and GOI sub-Indices

	June 2014 Average*	% Change	
		M/M	Y/Y
GOI	257	- 3.9%	- 8.8%
Wheat	236	- 6.8%	- 4.9%
Maize	226	- 7.3%	- 23.1%
Rice	179	+ 1.7%	- 9.1%
Soybeans	271	- 2.6%	- 5.5%

*Jan 2000=100, derived from daily export quotations

Wheat: The IGC GOI wheat sub-Index fell by around 4 percent m/m in June, weighed by increasing confidence that world supplies will be comfortable during 2014/15. US markets were given some support from poor winter wheat yields and concerns that late-season rains were downgrading quality, but values still posted overall declines. In the Black Sea region, easing worries about the impact of political tensions on grains trading saw price falls accelerate, pressured by a mostly positive outlook for crops. There was some underpinning for Black Sea values from a growing list of reported new crop export sales.

Maize: An improving outlook for the next world maize harvest triggered a near-7 percent drop in the IGC GOI maize sub-Index during June. Falls were led by the US, where the recently sown crop made good progress, with only limited support from overly wet weather in isolated areas and from strong demand for ethanol production. Despite recent harvest delays, notably in Argentina, anticipated strong competition from large southern hemisphere supplies added to the weaker tone.

Rice: Solid buying interest amid tightening availabilities in Asian suppliers, especially in Thailand where exporters' access to government reserves was limited, contributed to modestly firmer quotations in the past month. The IGC GOI rice sub-Index rose by nearly 2 percent m/m.

Soybeans: Expectations for plentiful US and world supplies pressured soybean markets during June, as the IGC GOI soybeans sub-Index eased by almost 3 percent. With harvesting of expected record crops nearly finished in South America, seasonally slowing export demand weighed in the US, while reports of slackening feed demand in China added to the negative tone. However, quotations in Brazil were supported by a marked reduction in farmer selling.

Policy Developments

WHEAT

- **Brazil** introduced a 1 million tonne duty-free import quota for non-Mercosur wheat, that will be in place from 23 June until 15 August 2014.
- In **Egypt**, the maximum moisture content in wheat imports was raised from 13 percent to 13.5 percent; the new moisture content is applicable for the next nine months.

RICE

- **India** will release 5 million tonnes of rice from government reserves onto the domestic market to control food price inflation.
- The “Rice for Poor” programme announced in **Indonesia** includes a Social Protection Card (KPS). Eligible households earn below 25 percent of average earnings in the country (about 15.5 million). The subsidized price is IDR 1,600 (USD 0.14) per kg.
- **Italy** is seeking a EUR 170/tonne (USD 230/t) additional import tariff on rice to limit low-priced imports from certain Asian suppliers. This would increase protection levels to EUR 623.28/tonne (USD 844/tonne).
- The government of **Nigeria** lowered its tariff on rice exports from 110 percent to 72 percent applicable to trade concluded after 1 January 2014.
- On 19 June 2014, the WTO Council for Trade in Goods approved **the Philippines'** draft waiver request to extend the application of quantitative restrictions on rice until 30 June 2017. Under the draft waiver, the bound quota for rice is to be expanded to 805,200 metric tonnes to be managed on a country-specific basis while import duties are not to exceed 35 percent. The General Council will consider the draft waiver for adoption at its next meeting. The WTO will keep the operation of the quota under annual review until 30 June 2017, at which point the importation of rice into the Philippines is to be subject to ordinary customs duties.
- A new scheme is under development in **Thailand** that will support rice farmers in covering their costs. The scheme replaces the suspended rice pledging programme. Payments to rice farmers who had pledged their rice have been finalised, they were funded through loans and the release of rice from state reserves was continued.
- The government of **Viet Nam** is considering the removal of minimum export price for rice.
- At the request of a Congressional Panel, the **United States** International Trade Commission will conduct an investigation of the impact of respective government policies in the major rice producing and exporting countries. The review will consider all the factors affecting competition in global rice trade. It is due to be released in April 2015.

ETHANOL AND BIOFUELS

- **Argentina** suspended its consumption tax on biodiesel used for transportation and power generation, currently at 19 percent and 22 percent respectively, until 31 December 2015.
- To allay concerns relating to the impact of biofuels on global food prices and sustainability, the **European Union's** member States reached a common position on 13 June to limit the use of "first-generation" biofuels obtained from agricultural crops such as corn and rapeseed. If approved by the relevant EU institutions, the cap applying to energy use by the transport sector would be reduced to 7 percent by 2020 (compared to the 10 percent cap agreed in 2009).
- The European Commission and its member States have recently agreed to introduce anti-dumping duties on US-origin ethanol entering the **European Union** via Norway. Anti-dumping duties have applied on U.S. ethanol imports since February 2013.
- In the **United States**, the deadline for refiners to show compliance with the 2013 biofuel use mandate was extended to 30 September. The State of Minnesota raised its mandatory blending requirement from 5 percent to 10 percent for the summer season (from July to September). The higher blend will be available again as from April 2015.

Futures Markets

Historical Volatility – 30 Days

	Monthly Averages		
	June 2014	May 2014	June 2013
Wheat (Nearby)	17.2%	25.7%	20.3%
Maize (May)	19.2%	20.4%	25.1%
Rice (Nearby)	13.4%	10.1%	17.0%
Soybeans(Nearby)	19.1%	21.0%	27.5%

Futures Prices

Prices for wheat, maize, rice and soybeans declined in June. Wheat prices fell as the Black Sea region reported above normal shipments and other exporting countries projected plentiful supplies for 2014/15 crop year. Maize and soybean prices decreased as the USDA rated the two US crops as over 70 percent good to excellent. It is also reported that China is in the process of auctioning some of its excess maize and soybean stocks held in intervention.

Volumes and Volatility

Volumes increased m/m mostly due to large selling by money managers as they exited or reduced large net long positions. Implied volatility declined in wheat, but increased slightly for maize and soybeans.

Forward curves

Forward curves for maize and wheat showed little change in configuration. Soybeans, however, displayed a relaxation of the steep backwardation between old crop July and new crop November from USD 90 per tonne to about USD 65 per tonne. US imports from Brazil are helping alleviate the tight US balance sheet, causing a decline in the persistent premium that July has maintained over November for the entire crop year.

Investment flows

Managed money was a large net seller of wheat, maize and soybeans. It reversed its net long position to a short position in wheat and reduced its net long in maize by 62,000 contracts (7.8m tonnes). Managed money significantly reduced its net long in soybeans by 77,000 contracts (10.6m tonnes), with most of the liquidation occurring in the old crop months. Commercials took advantage of lower price levels and were net buyers.

Explanatory Notes and Calendar

The notions of **tightening** and **easing** used in the summary table of “**World Supply and Demand**” reflect judgmental views which take into account market fundamentals, inter-alia price developments and short-term trends in demand and supply, especially changes in stocks.

All totals (aggregates) are computed from unrounded data. World supply and demand estimates/forecasts in this report are based on the latest data published by USDA, IGC and FAO. They may vary for many reasons, but mainly because of different methodologies and release dates.

FAO-AMIS: World estimates and forecasts are based on information received from AMIS countries as well as FAO data.

Dates: Refer to the release date of the data from the selected sources: FAO, IGC, and USDA.

Production: Cereal production data refer to the calendar year of the first year shown. Rice production is expressed in milled terms. Soybeans production data refer to the split (i.e. 2013/14) season.

Supply: Defined as production plus opening stocks.

Utilization: For wheat, maize and rice utilization includes food, feed and other uses (“other uses” comprise seeds, industrial utilization and post-harvest losses). For soybeans, it comprises crush, food and other uses.

Trade: Data refer to exports. For wheat and maize, trade is reported on a July/June marketing year basis, except for the USDA maize trade estimates, which are reported on an October/September basis. For rice, trade covers flows from January to December of the second year shown and for soybeans from October to September. Trade between European Union member states is excluded.

Ending Stocks: Data is calculated as the aggregate of carry-overs at the close of national crop seasons ending in the year shown.

AMIS Crop Calendar

* The percentages refer to the global share of production (average 2008-12).
